GENERAL DESCRIPTION

The **OP284-EP** is a dual, single-supply, 4.25 MHz bandwidth amplifier featuring rail-to-rail inputs and outputs (RRIO).

The **OP284-EP** is guaranteed to operate from 5 V to 36 V (or ± 2.5 V to ± 18 V).

This amplifier is superb for single-supply applications requiring both ac and precision dc performance. The combination of wide bandwidth, low noise, and precision makes the **OP284-EP** useful in a wide variety of applications, including filters and instrumentation.

Other applications for this amplifier include portable telecommunications equipment, power supply control and protection,

and use as an amplifier or buffer for transducers with wide output ranges. Sensors requiring a rail-to-rail input amplifier include Hall effect, piezoelectric, and resistive transducers.

The ability to swing rail to rail at both the input and output enables designers to build multistage filters in single-supply systems and to maintain high signal-to-noise ratios.

The **OP284-EP** is specified over the extended industrial temperature range of -55°C to $+125^{\circ}\text{C}$. The **OP284-EP** is available in a SOIC surface-mount package.
