

HA-2640, HA-2645

4MHz, High Supply Voltage Operational Amplifiers

FN2904
Rev 6.00
August 7, 2015

HA-2640 and HA-2645 are monolithic operational amplifiers which are designed to deliver unprecedented dynamic specifications for a high voltage internally compensated device. These dielectrically isolated devices offer very low values for offset voltage and offset current coupled with large output voltage swing and common mode input voltage.

For maximum reliability, these amplifiers offer unconditional output overload protection through current limiting and a chip temperature sensing circuit. This sensing device turns the amplifier "off", when the chip reaches a certain temperature level.

These amplifiers deliver $\pm 35\text{V}$ common mode input voltage range, $\pm 35\text{V}$ output voltage swing, and up to $\pm 40\text{V}$ supply range for use in such designs as regulators, power supplies, and industrial control systems. 4MHz gain bandwidth and $5\text{V}/\mu\text{s}$ slew rate make these devices excellent components for high performance signal conditioning applications. Outstanding input and output voltage swings coupled with a low 5nA offset current make these amplifiers excitation designs.

Features

- Output Voltage Swing $\pm 35\text{V}$
- Supply Voltage $\pm 10\text{V}$ to $\pm 40\text{V}$
- Offset Current. 5nA
- Bandwidth 4MHz
- Slew Rate. $5\text{V}/\mu\text{s}$
- Common Mode Input Voltage Range. $\pm 35\text{V}$
- Output Overload Protection

Applications

- Industrial Control Systems
- Power Supplies
- High Voltage Regulators
- Resolver Excitation
- Signal Conditioning

Absolute Maximum Ratings

Voltage Between V+ and V- Terminals 100V
 Differential Input Voltage Range 37V
 Output Current Full Short Circuit Protection

Operating Conditions

Temperature Range
 HA-2640-2 -55°C to 125°C
 HA-2645-5 0°C to 75°C

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTE:

1. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Thermal Information

Thermal Resistance (Typical, Note 1) θ_{JA} (°C/W) θ_{JC} (°C/W)
 CERDIP Package 135 50
 Metal Can Package 165 80
 Maximum Junction Temperature 175°C
 Maximum Storage Temperature Range -65°C to 150°C
 Maximum Lead Temperature (Soldering 10s) 300°C

Electrical Specifications $V_{SUPPLY} = \pm 40V$, $R_L = 5k\Omega$, Unless Otherwise Specified

PARAMETER	TEST CONDITIONS	TEMP (°C)	HA-2640-2			HA-2645-5			UNITS

About Intersil

Intersil Corporation is a leading provider of innovative power management and precision analog solutions. The company's products address some of the largest markets within the industrial and infrastructure, mobile computing and high-end consumer markets.

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at www.intersil.com.

You may report errors or suggestions for improving this datasheet by visiting www.intersil.com/ask.

Reliability reports are also available from our website at www.intersil.com/support

Metal Can Packages (Can)

NOTES:

- (All leads) $\varnothing b$ applies between $L1$ and $L2$. $\varnothing b1$ applies between $L2$ and 0.500 from the reference plane. Diameter is uncontrolled in $L1$ and beyond 0.500 from the reference plane.
- Measured from maximum diameter of the product.
- α is the basic spacing from the centerline of the tab to terminal 1 and β is the basic spacing of each lead or lead position ($N - 1$ places) from α , looking at the bottom of the package.
- N is the maximum number of terminal positions.
- Dimensioning and tolerancing per ANSI Y14.5M - 1982.
- Controlling dimension: INCH.

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH
