

SN54LS385, SN74LS385 QUADRUPLE SERIAL ADDERS/SUBTRACTORS

D2412, NOVEMBER 1977 — REVISED MARCH 1988

- Four Synchronous Elements in a Single 20-Pin Package
- Buffered Clock and Direct Clear Inputs
- Independent Two's-Complement Addition/Subtraction

description

The 'LS385 is a general purpose adder/subtractor and is particularly useful as a companion part to the SN54LS384/SN74LS384 serial/parallel two's-complement multiplier. The 'LS385 contains four independent adder/subtractor elements with common clock and clear.

Each of the four independent sum (Σ) outputs reflects its respective A and B input as controlled by the S/ $\bar{A}$ control. When S/ $\bar{A}$ is high the Σ function is A minus B. When S/ $\bar{A}$ is low the Σ function is A plus B.

When low, the clear input asynchronously resets the sum flip-flop low and the carry flip-flop either high in the subtract mode or low in the add mode. The clock is positive-edge triggered and controls the sum and carry flip-flops according to the function table.
