

## General Purpose CMOS Analog Switches

### General Description

Maxim's DG381-DG390 and DG381A-DG390A CMOS dual and quad analog switches combine low power operation with fast switching times and superior DC and AC switch characteristics. On resistance is less than 50Ω and is essentially constant over the analog signal range. Device specifications are ideal for battery powered circuitry.

These switches are available in a variety of formats as outlined below in the Pin Configurations section. The switch control logic inputs are fully TTL and CMOS compatible. Also featured are "break-before-make" switching and low charge injection.

Maxim's DG381-DG390 and DG381A-DG390A families are electrically compatible and pin compatible with the original manufacturer's devices. All devices will operate with power supplies ranging from ±5V to ±18V. Single supply operation is implemented by connecting V<sup>-</sup> to GND.

### Applications

Portable Instruments  
Low Power Sample/Holds  
Power Supply Switching  
Programmable Gain Amplifiers  
SPDT and DPDT Functions  
Process Control and Telemetry

### Features

- ◆ Monolithic Low Power CMOS
- ◆ Latch-Up Proof Construction
- ◆ Fully Compatible 2nd Source
- ◆ Low On Resistance, <50Ω
- ◆ Fast Switching Time
- ◆ V<sup>+</sup> to V<sup>-</sup> Analog Signal Range
- ◆ Single Supply Capability

Stresses listed under "Absolute Maximum Ratings" may be applied (one at a time) to devices without resulting in permanent damage. These are stress ratings only, and functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.

**Note 1:** Signals on S<sub>x</sub>, D<sub>x</sub>, or I<sub>Nx</sub> exceeding V<sup>+</sup> or V<sup>-</sup> will be clamped by internal diodes. Limit diode forward current to maximum current ratings.

**Note 2:** The algebraic convention whereby the most negative value is a minimum, and the most positive value is a maximum is used in this data sheet.

**Note 3:** Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.

**Note 4:** OFF isolation = 20 log  $\frac{V_S}{V_D}$ , V<sub>S</sub> = input to OFF switch, V<sub>D</sub> = Output.

## Application Information

All DG381 family switches will operate with  $\pm 5$  to  $\pm 15$ V power supplies. They can also be used with single ended power supplies ranging from +10V to +30V where the  $V^-$  terminal is connected to ground. In either case analog signals ranging from  $V^+$  to  $V^-$  can be switched.

The on resistance variation with analog signal and supply voltage is shown in the Typical Operating Characteristics graphs. The temperature coefficient of  $R_{ON}$  is typically 0.5%/°C. Typical on resistance matching from channel to channel is 10%. In addition, Table 1 outlines some typical parameters for single supply operation.

## DG381A

### Part Number Table

#### Notes:

1. See the [DG381A QuickView Data Sheet](#) for further information on this product family or download the [DG381A full data sheet](#) (PDF, 312kB).
2. Other options and links for purchasing parts are listed at: <http://www.maxim-ic.com/sales>.
3. [Didn't Find What You Need?](#) Ask our applications engineers. Expert assistance in finding parts, usually within one business day.
4. Part number suffixes: T or T&R = tape and reel; + = RoHS/lead-free; # = RoHS/lead-exempt. More: See [full data sheet](#) or [Part Naming Conventions](#).
5. \* Some packages have variations, listed on the drawing. "PkgCode/Variation" tells which variation the product uses.
