

Dual Operational Amplifiers for Commercial Industrial, and Military Applications

March 1993

Features

- Internal Frequency Compensation for Unity Gain
- High DC Voltage Gain 100dB (Typ.)
- Wide Bandwidth at Unity Gain 1MHz (Typ.)
- Wide Power Supply Range:
 - Single Supply 3 to 30V
 - Dual Supplies ± 1.5 to ± 15 V
- Low Supply Current 1.5 mA (Typ.)
- Low Input Bias Current
- Low Input Offset Voltage and Current
- Input Common-Mode Voltage Range Includes Ground
- Differential Input Voltage Range Equal to V_{+} Range
- Large Output Voltage Swing 0 to $V_{+} - 1.5$ V

Description

The CA158, CA158A, CA258, CA258A, CA358, CA358A and CA2904 types consist of two independent, high gain, internally frequency compensated operational amplifiers which are designed specifically to operate from a single power supply over a wide range of voltages. They may also be operated from split power supplies. The supply current is basically independent of the supply voltage over the recommended voltage range.

These devices are particularly useful in interface circuits with digital systems and can be operated from the single common 5V_{DC} power supply. They are also intended for transducer amplifiers, DC gain blocks and many other conventional op amp circuits which can benefit from the single power supply capability.

The CA158, CA158A, CA258, CA258A, CA358, CA358A, and CA2904 types are an equivalent to or a replacement for the industry types 158, 158A, 258, 258A, 358, 358A, and CA2904.

Ordering Information

PART NUMBER	SUFFIX LETTERS	PACKAGE
CA158, A CA258, A CA358, A CA2904	E	8 Lead Plastic DIP
	M	8 Lead SOIC
CA158, A CA258, A CA358, A	T	8 Pin TO-5 Can with Standard Leads
	S	8 Pin TO-5 Can with Dual-In-Line Formed Leads

Specifications CA158, CA158A, CA258, CA258A, CA358, CA358A, CA2904, LM358, LM2904

Absolute Maximum Ratings

Supply Voltage (Note 5)
 CA2904 26V or $\pm 13V$
 Other Types 32V or $\pm 16V$
 Differential Input Voltage (All Types) 32V
 Input Voltage -0.3V to V_{+}
 Input Current ($V_i < -0.3V$) (Note 5) 50mA
 Output Short Circuit Duration ($V_{+} \leq 15V$) (Note 6) Continuous
 Power Dissipation
 Up to $T_A = -55^{\circ}C$ 630mW
 Above $T_A = -55^{\circ}C$ Derate Linearly at 6.67 mW/ $^{\circ}C$
 Junction Temperature $+175^{\circ}C$
 Junction Temperature (Plastic Package) $+150^{\circ}C$
 Lead Temperature (Soldering 10 Sec.) $+300^{\circ}C$

Operating Conditions

Operating Temperature Range $-55^{\circ}C$ to $+125^{\circ}C$
 Storage Temperature Range $-65^{\circ}C$ to $+150^{\circ}C$

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

Electrical Specifications

Values Apply for Each Operational Amplifier, Supply Voltage (V_{+}) = 5V,
 Unless Otherwise Specified

PARAMETERS	SYMBOL	TEST CONDITIONS	CA158A LIMITS			UNITS
			MIN	TYP	MAX

Temperature Coefficient of Input Offset Voltage	∝V _{IO}	R _S = 0Ω	-	7	15	μV/°C
Input Offset Current	I _{IO}	I _{I+} - I _{I-}	-	-	30	nA
Temperature Coefficient of Input Offset Current	∝I _{IO}		-	10	200	pA/°C
Input Bias Current	I _{IB}	I _{I+} or I _{I-}	-	40	100	nA
Input Common Mode Voltage Range	V _{ICR}	V+ = 30V (Note 2)	0	-	V+ -2	V

Specifications CA158, CA158A, CA258, CA258A, CA358, CA358A, CA2904, LM358, LM2904

Electrical Specifications Values Apply for Each Operational Amplifier, Supply Voltage (V+) = 5V, Unless Otherwise Specified (Continued)

PARAMETERS	SYMBOL	TEST CONDITIONS	CA158A LIMITS			UNITS
			MIN	TYP	MAX	
Supply Current	I+	$R_L = \infty$ On all amplifiers	-	0.7	1.2	mA
		$R_L = \infty$, $V_+ = 30V$	-	1.5	3	mA

NOTES:

1. Due to the p-n-p input stage the direction of the input current is out of the IC. No loading change exists on the input lines because this current is essentially constant, independent of the state of the output.
2. The input signal voltages and the input common mode voltage should not be allowed to go negative by more than 0.3V. The positive limit of the common mode voltage range is $V_+ - 1.5V$, but either or both inputs can go to +32V without damage.
3. $V_O = 1.4V_{DC}$, $R_S = 0\Omega$ with V_+ from 5V to 30V; and over the full input common mode voltage range (0V to $V_+ - 1.5V$).
4. The maximum output current is approximately 40mA independent of the magnitude of V_+ . Continuous short circuits at $V_+ > 15V$ can cause excessive power dissipation and eventual destruction. Short circuits from the output to V_+ can cause overheating and eventual destruction of the device. Destructive dissipation can result from simultaneous short circuits on both amplifiers.
5. This input current will only exist when the voltage at any of the input leads is driven negative. This current is due to the collector base junction of the input p-n-p transistors becoming forward biased and thereby acting as input diode clamps. In addition to this diode action, there is also lateral n-p-n parasitic transistor action on the IC chip. This transistor action can cause the output voltages of the amplifiers to go to the V_+ voltage level (or to ground for a large overdrive) for the time duration that an input is driven negative. This transistor action is not destructive and normal output states will re-establish when the input voltage, which was negative, again returns to a value greater than -0.3VDC.
6. The maximum output current is approximately 40mA independent of the magnitude of V_+ . Continuous short circuits at $V_+ > 15V$ can cause excessive power dissipation and eventual destruction. Short circuits from the output to V_+ can cause overheating and eventual destruction of the device. Destructive dissipation can result from simultaneous short circuits on both amplifiers.

Metallization Mask Layout

Dimensions in parentheses are in millimeters and derived from the basic inch dimensions as indicated. Grid graduations are in mils (10^{-3} inch).

The photographs and dimensions represent a chip when it is part of the wafer. When the wafer is cut into chips, the cleavage angles are 57° instead of 90° with respect to the face of the chip. Therefore, the isolated chip is actually 7 mils (0.17mm) larger in both dimensions.
