

ASNT5131-KMC DC-28Gbps Limiting Amplifier

- Broadband (DC-28Gbps) limiting amplifier
- Exhibits low jitter and limited temperature variation over industrial temperature range
- 100MHz of bandwidth for the amplitude adjustment tuning port
- Ideal for high speed proof-of-concept prototyping
- Fully differential CML input interfaces
- Fully differential CML output interface with adjustable SE amplitude from 0V to 1.0V
- Single +5.0V or -5.0V power supply
- Power consumption: 500mW
- Fabricated in SiGe for high performance, yield, and reliability
- Custom CQFP 24-pin package

DESCRIPTION

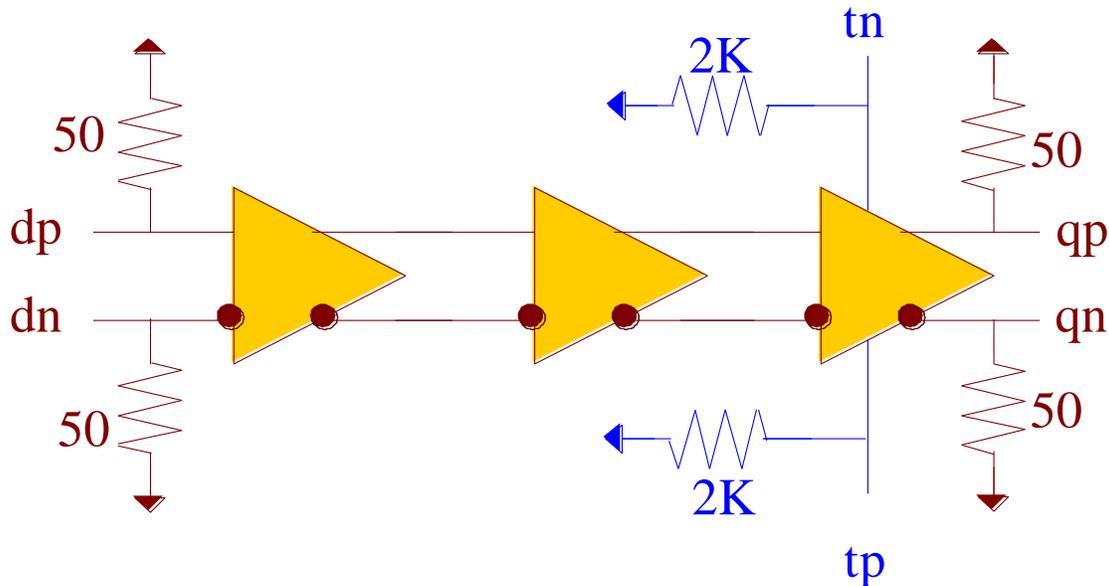

Fig. 1. Functional Block Diagram

The temperature stable ASNT5131-KMC SiGe IC provides extremely low jitter broadband signal amplitude control capability, and is intended for use in high-speed measurement / test equipment. The IC shown in Fig. 1 can process a high-speed data signal dp/dn and deliver a high-speed data output signal qp/qn with its output signal amplitude controlled by tuning ports tp/tn.

The part's I/O's support the CML logic interface with on chip 50 Ω termination to vcc and may be used differentially, AC/DC coupled, single-ended, or in any combination (see also POWER SUPPLY CONFIGURATION). In the DC-coupling mode, the input signal's common mode voltage should comply with the specifications shown in ELECTRICAL CHARACTERISTICS. In the AC-coupling mode, the input termination provides the required common mode voltage automatically. The differential DC signaling mode is recommended for optimal performance.

POWER SUPPLY CONFIGURATION

The part can operate with either negative supply (vcc = 0.0V = ground and vee = -5.0V), or positive supply (vcc = +5.0V and vee = 0.0V = ground). In case of the positive supply, all I/Os need AC termination when connected to any devices with 50 Ω termination to ground. Different PCB layouts will be needed for each different power supply combination.

All the characteristics detailed below assume vcc = 0.0V and vee = -5.0V.

ABSOLUTE MAXIMUM RATINGS

Caution: Exceeding the absolute maximum ratings shown in Table 1 may cause damage to this product and/or lead to reduced reliability. Functional performance is specified over the recommended operating conditions for power supply and temperature only. AC and DC device characteristics at or beyond the absolute maximum ratings are not assumed or implied. All min and max voltage limits are referenced to ground (assumed vcc).

Table 1. Absolute Maximum Ratings

Parameter	Min	Max	Units
Supply Voltage (vee)		-5.5	V
Power Consumption		0.55	W
RF Input Voltage Swing (SE)		1.0	V
Case Temperature		+90	°C
Storage Temperature	-40	+100	°C
Operational Humidity	10	98	%
Storage Humidity	10	98	%

TERMINAL FUNCTIONS

TERMINAL			DESCRIPTION
Name	No.	Type	
High-Speed I/Os			
dp	21	CML input	Differential high-speed signal inputs with internal SE 50Ohm termination to vcc.
dn	23		
qp	11	CML output	Differential high-speed signal outputs with internal SE 50Ohm termination to vcc. Require external SE 50Ohm termination to vcc.
qn	9		
tp	5	CML input	Differential output amplitude control signal with internal 2KOhm termination to vcc.
tn	15		
Supply and Termination Voltages			
Name	Description		Pin Number
vcc	Positive power supply (+5.0V or 0)		2, 3, 4, 6, 8, 10, 12, 14, 16, 17, 18, 20, 22, 24
vee	Negative power supply (0V or -5.0V)		1, 7, 13, 19

ELECTRICAL CHARACTERISTICS

PARAMETER	MIN	TYP	MAX	UNIT	COMMENTS
General Parameters					
vee	-4.7	-5.0	-5.3	V	±6%
vcc		0.0		V	External ground
I _{vee}		100		mA	
Power consumption		500		mW	
Junction temperature	-40	25	125	°C	
HS Input Data (dp/dn)					
Frequency	DC		28	Gbps	
Swing	0.05		1.0	V	Differential or SE, p-p
CM Voltage Level	vcc-0.8		vcc	V	Must match for both inputs
HS Output Data (qp/qn)					
Frequency	DC		28	Gbps	
Logic "1" level		vcc		V	
Logic "0" level	vcc-1.0	vcc-0.5	vcc	V	With external 50Ωm DC termination, and full range of tp/tn control signal
Rise/Fall times	10	12	14	ps	20%-80%
Output Jitter			1	ps	Peak-to-peak
Duty cycle	45	50	55	%	
Tuning port (tp/tn)					
Bandwidth	DC		100	MHz	
Swing		vcc-0.5		V	Differential
CM Voltage Level	vcc-0.5		vcc	V	Must match for both inputs

PACKAGE INFORMATION

The chip die is housed in a custom 24-pin CQFP package shown in Fig. 2. The package provides a center heat slug located on its back side to be used for heat dissipation. ADSANTEC recommends for this section to be soldered to the vcc plain, which is ground for a negative supply, or power for a positive supply.

The part's identification label is ASNT5131-KMC. The first 8 characters of the name before the dash identify the bare die including general circuit family, fabrication technology, specific circuit type, and part version while the 3 characters after the dash represent the package's manufacturer, type, and pin out count.

This device complies with the Restriction of Hazardous Substances (RoHS) per 2011/65/EU for all ten substances.
