

High Speed Current Feedback Operational Amplifier

■ General Description

The NJM2723 is a high speed, wide bandwidth and high output current feedback operational amplifier. Driving 150Ω load can expand the versatility of several multimedia applications. Current feedback technology has wide bandwidth and Low supply current.

With a 75MHz at $G=+2$, 24MHz at $G=+10$, high slew rate of 2000V/μs, second harmonic distortion -65dB and settling time of 50ns(0.1%) The NJM2723 makes it ideal for high frequency amplifier, active filter and pulse amplifier applications.

■ Features

High Speed

- Bandwidth 75MHz (-3dB, $G=+2$)
- Bandwidth 24MHz (-3dB, $G=+10$)
- Slew Rate 2000V/μs

For Video Applications ($V^+/V^-=\pm 5V$)

- Bandwidth 52MHz (-3dB, $G=+2$)
- Bandwidth 8MHz (0.1dB, $G=+2$)
- Differential Gain 0.05%
- Differential Phase 0.25deg
- Settling Time 50ns (0.1%, $G=+2$)

Low Noise

- Voltage Noise 6nV/√Hz (@1kHz)
- Current Noise 13pA/√Hz (@1kHz)
- THD -60dBc (@10MHz)

- Specified for $\pm 5V$ and $\pm 15V$ operation
- 150Ω Drive Capability
- Output Voltage $\pm 3.5V$ min. ($R_L=150\Omega$, $V^+/V^-=\pm 15V$)
 $\pm 2.4V$ min. ($R_L=150\Omega$, $V^+/V^-=\pm 5V$)
- Supply Range $\pm 3.5V \sim \pm 17.5V$
- Supply Current 5mA max.

■ Applications

- High frequency amplifier
- Active Filter
- 150Ω cable driver
- Video amplifier

■ TYPICAL CHARACTERISTICS

■ Application Note

- Choice of feedback resistor and gain resistor for current feedback operational Amplifier

The NJM2723 is a current feedback operational amplifier. Closed-loop bandwidth depends on the feedback resistor value. Table1 shows recommended resistor values for a variety of useful closed-loop gains and supply voltages.

Figure1. Formula of non-inverting / inverting amplifier

Table1. -3dB Bandwidth vs. Closed-loop Gain and Resistance Value

V ⁺ /V ⁻ =±15V				V ⁺ /V ⁻ =±5V			
Closed-Loop Gain	R _F [Ω]	R _G [Ω]	-3dB BW[MHz]	Closed-Loop Gain	R _F [Ω]	R _G [Ω]	-3dB BW[MHz]
+1	750	-	120	+1	680	-	85
+2	680	680	76	+2	680	680	52
+10	680	75	20	+10	620	68	15
-1	680	680	65	-1	680	680	50
-10	680	68	25	-10	680	68	20

- In case of using Voltage follower

The feedback resistance must be inserted when using a current feedback amplifier as the voltage follower. A current feedback amplifier cannot be used by connecting output pin and inverting input pin directly. (Figure2)

Figure2. Voltage follower circuit

- In case of using capacitive Feedback

For a current feedback amplifier stability operation, do not use a compensation capacitor in parallel with feedback resistance. The dynamic impedance of capacitor in the feedback loop reduces the amplifier's stability.

Figure3. Non-stability circuit example
