

5483A 4-Bit Binary Full Adder with Fast Carry

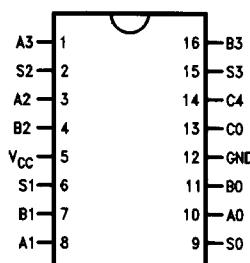

General Description

The '83A high speed 4-bit binary full adders with internal carry lookahead accept two 4-bit binary words (A_0-A_3 , B_0-B_3) and a Carry input (C_0). They generate the binary Sum outputs (S_0-S_3) and the Carry output (C_4) from the most

significant bit. They operate with either HIGH or active LOW operands (positive or negative logic). The '283 is recommended for new designs since it features standard corner power pins.

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Operating Free Air Temperature Range	
DM54	-55°C to + 125°C
Storage Temperature Range	-65°C to + 150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Functional Description

The '83A adds two 4-bit binary words (A and B) plus the incoming carry. The binary sum appears on the sum outputs (S_0-S_3) and outgoing carry (C_4) outputs.

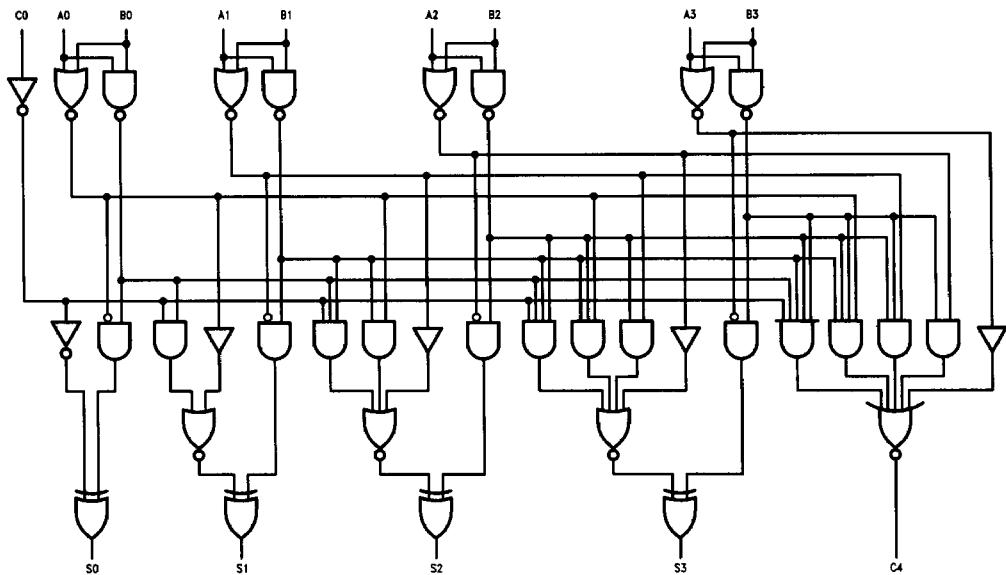

$$C_0 + (A_0 + B_0) + 2(A_1 + B_1) + 4(A_2 + B_2) + 8(A_3 + B_3) = S_0 + 2S_1 + 4S_2 + 8S_3 + 16C_4$$

Where: (+) = plus

Due to the symmetry of the binary add function the '83A can be used either with all inputs and outputs active HIGH (positive logic) or with all inputs and outputs active LOW (negative logic). Note that with active HIGH inputs, Carry In can not be left open, but must be held LOW when no carry in is intended.

Interchanging inputs of equal weight does not affect the operation, thus C_0 , A_0 , B_0 can be arbitrarily assigned to pins 10, 11, 13, etc.
