NCV8411

Self-Protected Low Side Driver with In-Rush Current Management

The NCV8411 is a three terminal protected Low-Side Smart Discrete FET. The protection features include Delta Thermal Shutdown, overcurrent, overtemperature, ESD and integrated Drain to Gate clamping for over voltage protection. The device also offers fault indication via the gate pin. This device is suitable for harsh automotive environments.

Features

- Short Circuit Protection with In-Rush Current Management
- Delta Thermal Shutdown
- Thermal Shutdown with Automatic Restart
- Over Voltage Protection
- Integrated Clamp for Over Voltage Protection and Inductive Switching
- ESD Protection
- dV/dt Robustness
- Analog Drive Capability (Logic Level Input)
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q101 Qualified and PPAP Capable
- These Devices are Pb-Free and are RoHS Compliant

Typical Applications

- Switch a Variety of Resistive, Inductive and Capacitive Loads
- Can Replace Electromechanical Relays and Discrete Circuits
- Automotive / Industrial

APPLICATION INFORMATION

Circuit Protection Features

The NCV8411 has three main protections. Current Limit, Thermal Shutdown and Delta Thermal Shutdown. These protections establish robustness of the NCV8411.

Current Limit and Short Circuit Protection

The NCV8411 has current sense element. In the event that the drain current reaches designed current limit level, integrated Current Limit protection establishes its constant level.

Delta Thermal Shutdown

Delta Thermal Shutdown (DTSD) Protection increases higher reliability of the NCV8411. DTSD consist of two independent temperature sensors – cold and hot sensors. The

NCV8411 establishes a slow junction temperature rise by sensing the difference between the hot and cold sensors. ON/OFF output cycling is designed with hysteresis that results in a controlled saw tooth temperature profile (Figure 23). The die temperature slowly rises (DTSD) until the absolute temperature shutdown (TSD) is reached around 175°C.

Thermal Shutdown with Automatic Restart

Internal Thermal Shutdown (TSD) circuitry is provided to protect the NCV8411 in the event that the maximum junction temperature is exceeded. When activated at typically 175°C, the NCV8411 turns off. This feature is provided to prevent failures from accidental overheating.
