

# Quad 2-Input Data Selector/Multiplexer with Enable

**ELECTRICALLY TESTED PER:  
MIL-M-38510/30904**

The LSTTL/MSI 54LS158 is a high-speed Quad 2-Input Multiplexer. It selects four bits of data from two sources using the common Select and Enable inputs. The four buffered outputs preset the selected data in the inverted form. The 'LS158 can also generate any four of the 16 different functions of two variables. The 'LS158 is fabricated with the Schottky barrier diode process for high speed and is completely compatible with all Motorola TTL families.

- Schottky Process For High-Speed
- Multifunction Capability
- Inverted Outputs
- Input Clamp Diodes Limit High-Speed Termination Effects

## 54LS158

### FUNCTIONAL DESCRIPTION

The 'LS158 is a Quad 2-Input Multiplexer fabricated with the Schottky barrier diode process high speed. It selects four bits of data from two sources under the control of a common Select Input (S) and presets the data in inverted form at the four outputs. The Enable Input (G) is Active LOW. When G is HIGH, all of the outputs (Y) are forced HIGH regardless of all other inputs.

The 'LS158 is the logic implementation of a 4-pole, 2-position switch where the position of the switch is deter-

mined by the logic levels supplied to the Select Input.

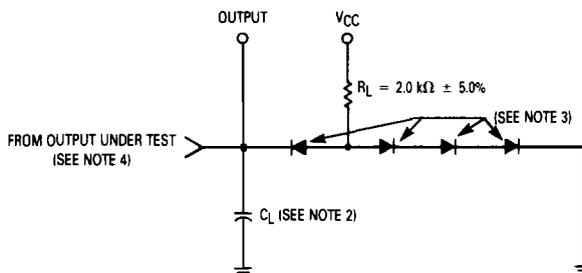

A common use of the 'LS158 is the moving of data from two groups of registers to four common output busses. The particular register from which the data comes is determined by the state of the Select Input. A less obvious use is as a function generator. The 'LS158 can generate four different functions of two variables with one variable common. This is useful for implementing gating functions.

Pin Names		Loading (Note a)	
		HIGH	LOW
S	Common Select Input	1.0 U.L.	0.5 U.L.
G	Enable (Active LOW) Input	1.0 U.L.	0.5 U.L.
A <sub>1</sub> -A <sub>4</sub>	Data Inputs from Source 0	0.5 U.L.	0.25 U.L.
B <sub>1</sub> -B <sub>4</sub>	Data Inputs from Source 1	0.5 U.L.	0.25 U.L.
Y <sub>1</sub> -Y <sub>4</sub>	Multiplexer Outputs (Note b)	10 U.L.	5(2.5) U.L.

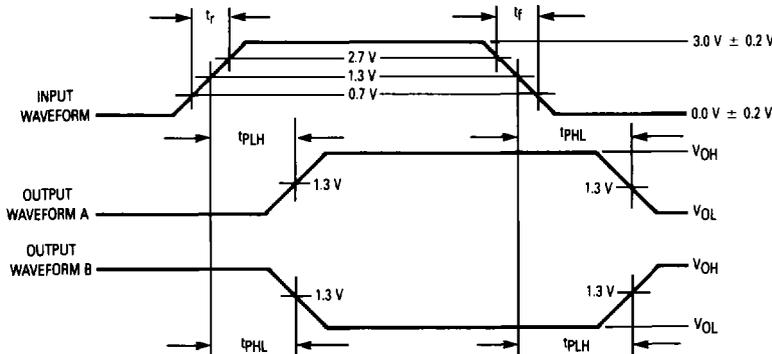

#### NOTES:

- One TTL Unit Load (U.L.) = 40  $\mu$ A HIGH; 1.6 mA LOW.
- The Output LOW drive factor is 2.5 U.L. for Military (54) Temperature Ranges.

### AC TEST CIRCUIT

### WAVEFORMS

#### NOTES:

- Input pulse generator has the following characteristics:  
 $t_r \leq 15$  ns,  $t_f \leq 6.0$  ns,  $PRR \leq 1.0$  MHz.
- $C_L = 50$  pF  $\pm 10\%$ , including scope probe and jig capacitance.
- $R_L = 2.0$  k $\Omega$   $\pm 5.0\%$ . All diodes are 1N3064 or 1N916.
- Load circuit on a given output is only required where the specific test in table 1 indicates "OUT" on that output.
- Voltage measurements are to be made with respect to network ground terminal.
