

THC63LVD104C

112MHz 30Bits COLOR LVDS Receiver

General Description

The THC63LVD104C receiver is designed to support pixel data transmission between Host and Flat Panel Display from NTSC up to SXGA resolutions. The THC63LVD104C converts the LVDS data streams back into 35bits of CMOS/TTL data with the choice of the rising edge or falling edge clock for the convenience with a variety of LCD panel controllers. At a transmit clock frequency of 112MHz, 30bits of RGB data and 5bits of timing and control data (HSYNC, VSYNC, DE, CNTL1, CNTL2) are transmitted at an effective rate of 784Mbps per LVDS channel. Using a 112MHz clock, the data throughput is 490Mbytes per second

Features

- Wide dot clock range: 8-112MHz suited for NTSC, VGA, SVGA, XGA, and SXGA
- PLL requires no external components
- 50% output clock duty cycle
- TTL clock edge programmable
- Power down mode
- Low power single 3.3V CMOS design
- 64pin TQFP
- Backward compatible with THC63LVDF64x (18bits) / F84x(24bits)
- Pin compatible with THC63LVD104A
- Fail-safe for Open LVDS Input

Note

1)Power On Sequence

Power on LVDS-Tx after THC63LVD104C.

2)Cable Connection and Disconnection

Don't connect and disconnect the LVDS cable, when the power is supplied to the system.

3)GND Connection

Connect the each GND of the PCB which LVDS-Tx and THC63LVD104C on it. It is better for EMI reduction to place GND cable as close to LVDS cable as possible.

4)Multi Drop Connection

Multi drop connection is not recommended.

5)Asynchronous use

Asynchronous use such as following systems are not recommended.

5. This product is not designed for applications that require extremely high-reliability/safety such as aerospace device, nuclear power control device, or medical device related to critical care, excluding when this product is specified for automotive use by THine and used it for that purpose. THine accepts no liability whatsoever for any damages, claims or losses arising out of the uses set forth above.
6. Despite our utmost efforts to improve the quality and reliability of the product, faults will occur with a certain small probability, which is inevitable to a semi-conductor product. Therefore, you are encouraged to have sufficiently redundant or error preventive design applied to the use of the product so as not to have our product cause any social or public damage.
7. Please note that this product is not designed to be radiation-proof.
8. Testing and other quality control techniques are used to this product to the extent THine deems necessary to support warranty for performance of this product. Except where mandated by applicable law or deemed necessary by THine based on the user's request, testing of all functions and performance of the product is not necessarily performed.
9. Customers are asked, if required, to judge by themselves if this product falls under the category of strategic goods under the Foreign Exchange and Foreign Trade Act.
10. The product or peripheral parts may be damaged by a surge in voltage over the absolute maximum ratings or malfunction, if pins of the product are shorted by such as foreign substance. The damages may cause a smoking and ignition. Therefore, you are encouraged to implement safety measures by adding protection devices, such as fuses.
11. This product is prohibited for the purpose of developing military modernization, including the development of weapons of mass destruction (WMD), and the purpose of violating human rights.
