

74S195

Four-Bit High Speed Shift Registers

The Am54S/74S194 and Am54S/74S195 are 4-bit registers that exhibit fully synchronous operation in all operating modes. The Am54S/74S195 can either parallel load all four register bits via the parallel inputs (A, B, C, D) or shift each of the four register bits right one place. The shifting or parallel loading is under control of the shift/load input (S/L). When the shift/load input is LOW, data is loaded from the parallel data inputs; when the shift/load input is HIGH, data is loaded from the register bits on the left. The first bit, Q_A , is loaded via the J and $\bar{K}$ inputs in the shift mode.

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All re-creations are done with the approval of the Original Component Manufacturer (OCM).

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-35835
 - Class Q Military
 - Class V Space Level
- Qualified Suppliers List of Distributors (QSLD)
 - Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OCM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

Four-Bit High-Speed Shift Registers

Distinctive Characteristics

- Parallel load or shift right with $\bar{J}\bar{K}$ inputs on Am54S/74S195
- Shift left, right, parallel load or do nothing on Am54S/74S194
- Fully synchronous shifting and parallel loading
- Buffered common clock
- Buffered common active-LOW clear
- 100% reliability assurance testing in compliance with MIL-STD-883

FUNCTIONAL DESCRIPTION

The Am54S/74S194 and Am54S/74S195 are 4-bit registers that exhibit fully synchronous operation in all operating modes. The Am54S/74S195 can either parallel load all four register bits via the parallel inputs (A, B, C, D) or shift each of the four register bits right one place. The shifting or parallel loading is under control of the shift/load input (S/L). When the shift/load input is LOW, data is loaded from the parallel data inputs; when the shift/load input is HIGH, data is loaded from the register bits on the left. The first bit, Q_A , is loaded via the J and $\bar{K}$ inputs in the shift mode.

The Am54S/74S194 operates in four modes under control of the two select inputs, S_0 and S_1 . The four modes are parallel load (data comes from the parallel inputs), shift right (data comes from the flip-flop to the left, with the Q_A bit input from R),

shift left (data comes from the flip-flop to the right, with the Q_D input from L), and hold or do nothing (each flip-flop receives data from its own output).

For both devices the outputs change state synchronously following a LOW-to-HIGH transition on the clock input, CP. Both devices have an active-LOW asynchronous clear (CLR) which forces all outputs to the LOW state ($\bar{Q}_D$ HIGH) independent of any other inputs. All control inputs are buffered to present only one Schottky TTL load to the system, and all outputs can drive 10 Schottky loads in the LOW state and 20 in the HIGH state. Because all the flip-flops are D-type they do not catch 0's or 1's, and the only requirements on any inputs is that they meet the short set-up and hold time intervals with respect to the clock LOW-to-HIGH transition.

I _{CC}	Power Supply Current	V _{CC} = MAX.	S194 (Note 5 & 7)	85	135	mA
			54S195 (Note 6)	70	99	
			74S195 (Note 6)	70	109	

- Notes: 1. For conditions shown as MIN. or MAX., use the appropriate value specified under Electrical Characteristics for the applicable device type.
2. Typical limits are at V_{CC} = 5.0V, 25°C ambient and maximum loading.
3. Actual input currents = Unit Load Current x Input Load Factor (See Loading Rules).
4. Not more than one output should be shorted at a time. Duration of the short circuit test should not exceed one second.
5. Outputs open. Inputs A, B, C, D grounded. Inputs S_D, S_P, Clear, L, R, at 4.5V. Measured after a momentary ground, then 4.5V applied to clock.
6. Outputs open. S/L grounded. A, B, C, D, J, K at 4.5V. Measured after applying a momentary ground then 4.5V to the clear followed by ground then 4.5V to clock.
7. For T_A = 125°C; I_{CC} MAX. = 110mA for Am54S194W.

Switching Characteristics (T_A = +25°C)

DEFINITION OF FUNCTIONAL TERMS

J, $\bar{K}$ The logic inputs used for controlling the Q_A flip-flop of the Am54S/74S195 register when S/L is HIGH.

CLR Clear. The asynchronous master reset input.

CP Clock pulse for the register. Enters data on the LOW-to-HIGH transition.

S/L Shift/Load. The input for selection of parallel or serial shifting for the Am54S/74S195 register. S/L LOW selects parallel entry.

S₀, S₁ The mode select inputs of the Am54S/74S194.

A, B, C, D The four parallel data inputs for the register.

R The serial input to the Q_A flip-flop of the Am54S/74S194 in the right shift mode.

L The serial input to the Q_D flip-flop of the Am54S/74S194 in the left shift mode.

Q_A, Q_B, Q_C, Q_D The four true outputs of the register.

$\bar{Q}_D$ The complement output of the Q_D flip-flop. (Am54S/74S195 only).

Notes: 1. If the J and $\bar{K}$ inputs are tied together, the common line becomes a D-Type input to the first bit in the shift mode.

2. Linear feedback shift counters can be made by connecting the Q_D and $\bar{Q}_D$ outputs to the K and J inputs, respectively.
