

## 9321/DM9321 Dual 1-of-4 Decoder

### General Description

The 9321 consists of two independent multipurpose decoders, each designed to accept two inputs and provide four mutually exclusive outputs. In addition an active LOW enable input, which gives demultiplexing capability, is provided for each decoder.

### Features

- Multifunction capability
- Mutually exclusive outputs
- Demultiplexing capability
- Active low enable for each decoder

### Connection Diagram

| Pin Names                                      | Description                  |
|------------------------------------------------|------------------------------|
| $\bar{E}a, \bar{E}b$                           | Enable Inputs (Active LOW)   |
| A0a, A1a, A0b, A1b                             | Address Inputs               |
| $\bar{O}0a-\bar{O}3a$<br>$\bar{O}0b-\bar{O}3b$ | Decoder Outputs (Active LOW) |

## Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

|                                      |                 |
|--------------------------------------|-----------------|
| Supply Voltage                       | 7V              |
| Input Voltage                        | 5.5V            |
| Operating Free Air Temperature Range |                 |
| MIL                                  | −55°C to +125°C |
| COMM                                 | 0°C to +70°C    |
| Storage Temperature Range            | −65°C to +150°C |

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

## Recommended Operating Conditions

| Symbol          | Parameter                      | Military |     |      | Commercial |     |      | Units |
|-----------------|--------------------------------|----------|-----|------|------------|-----|------|-------|
|                 |                                | Min      | Nom | Max  | Min        | Nom | Max  |       |
| V <sub>CC</sub> | Supply Voltage                 | 4.5      | 5   | 5.5  | 4.75       | 5   | 5.25 | V     |
| V <sub>IH</sub> | High Level Input Voltage       | 2        |     |      | 2          |     |      | V     |
| V <sub>IL</sub> | Low Level Input Voltage        |          |     | 0.8  |            |     | 0.8  | V     |

| I <sub>IH</sub> | High Level Input Current          | V <sub>CC</sub> = Max, V <sub>I</sub> = 2.4V                                               |                           |              | 40          | μA    |
| I <sub>IL</sub> | Low Level Input Current           | V <sub>CC</sub> = Max, V <sub>I</sub> = 0.4V                                               |                           |              | −1.6        | mA    |
| I <sub>OS</sub> | Short Circuit Output Current      | V <sub>CC</sub> = Max (Note 2)                                                             | MIL<br>−20<br>COM<br>−1.3 |              | −70<br>−3.7 | mA    |
| I <sub>CC</sub> | Supply Current                    | V <sub>CC</sub> = Max (Note 3)                                                             |                           |              | 50          | mA    |

Note 1: All typicals are at V<sub>CC</sub> = 5V, T<sub>A</sub> = 25°C.

Note 2: Not more than one output should be shorted at a time, and the duration should not exceed one second.

Note 3: I<sub>CC</sub> is measured with all outputs open and all inputs grounded.

## Switching Characteristics $V_{CC} = +5.0V$ , $T_A = +25^\circ C$ (See Section 1 for test waveforms and output load)

## Functional Description

The 9321 consists of two separate decoders each designed to accept two binary weighted inputs and provide four mutually exclusive active LOW outputs as shown in the logic symbol. Each decoder can be used as a 4-output demultiplexer by using the enable as a data input.

## Truth Table (Each Decoder)

| Inputs    |    |    | Outputs     |             |             |             |
|-----------|----|----|-------------|-------------|-------------|-------------|
| $\bar{E}$ | A0 | A1 | $\bar{O}_0$ | $\bar{O}_1$ | $\bar{O}_2$ | $\bar{O}_3$ |
| L         | L  | L  | L           | H           | H           | H           |
| L         | H  | L  | H           | L           | H           | H           |
| L         | L  | H  | H           | H           | L           | H           |
| L         | H  | H  | H           | H           | H           | L           |
| H         | X  | X  | H           | H           | H           | H           |

H = HIGH Voltage Level

L = LOW Voltage Level

X = Immaterial

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
