

Zero-Drift, Single-Supply, Rail-to-Rail I/O Quad, Operational Amplifier

Enhanced Product

AD8574-EP

FEATURES

- Low offset voltage: 1 μV
- Input offset drift: 0.005 $\mu\text{V}/^\circ\text{C}$
- Rail-to-rail input and output swing
- 5 V/2.7 V single-supply operation
- High gain: 145 dB typical
- CMRR: 140 dB typical
- PSRR: 130 dB typical
- Ultralow input bias current: 10 pA typical
- Low supply current: 750 μA per op amp
- Overload recovery time: 50 μs
- No external capacitors required

ENHANCED PRODUCT FEATURES

- Supports defense and aerospace applications (AQEC standard)
- Military temperature range (-55°C to $+125^\circ\text{C}$)
- Controlled manufacturing baseline
- One assembly/test site
- One fabrication site
- Product change notification
- Qualification data available on request

APPLICATIONS

- Temperature sensors
- Pressure sensors
- Precision current sensing
- Strain gage amplifiers

GENERAL DESCRIPTION

This amplifier has ultralow offset, drift, and bias current. The AD8574-EP is a quad amplifier, featuring rail-to-rail input and output swings. It is guaranteed to operate from 2.7 V to 5 V single supply.

The AD8574-EP provides benefits previously found only in expensive auto-zeroing or chopper stabilized amplifiers. Using a patented spread spectrum, auto-zero technique, the AD8574 eliminates the intermodulation effects from interaction of the chopping function with the signal frequency in ac applications.

With an offset voltage of only 1 μV and drift of 0.005 $\mu\text{V}/^\circ\text{C}$, the AD8574-EP is perfectly suited for applications where error sources must be minimized.

The AD8574-EP is specified for the military temperature range (-55°C to $+125^\circ\text{C}$). The AD8574-EP quad amplifier is available in a 14-lead TSSOP package.

Additional applications and technical information is available in the [AD8571/AD8572/AD8574](#) data sheets.

¹ Differential input voltage is limited to ± 5.0 V or the supply voltage, whichever is less.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

THERMAL CHARACTERISTICS

θ_{JA} is specified for the worst case conditions, that is, θ_{JA} is specified for a device soldered in a circuit board for TSSOP packages.

ESD CAUTION

ESD (electrostatic discharge) sensitive device.

Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
