

6-Channel High-Speed Logic-Level Translators

General Description

The MAX13030E–MAX13035E 6-channel, bidirectional level translators provide the level shifting necessary for 100Mbps data transfer in multivoltage systems. The MAX13030E–MAX13035E are ideally suited for memory-card level translation, as well as generic level translation in systems with six channels. Externally applied voltages, V_{CC} and V_L , set the logic levels on either side of the device. Logic signals present on the V_L side of the device appear as a higher voltage logic signal on the V_{CC} side of the device and vice versa. The MAX13035E features a CLK_RET output that returns the same clock signal applied to the CLK_VL input.

The MAX13030E–MAX13035E operate at full speed with external drivers that source as little as 4mA output current. Each I/O channel is pulled up to V_{CC} or V_L by an internal 30 μ A current source, allowing the MAX13030E–MAX13035E to be driven by either push-pull or open-drain drivers.

The MAX13030E–MAX13034E feature an enable (EN) input that places the device into a low-power shutdown mode when driven low. The MAX13030E–MAX13035E features an automatic shutdown mode that disables the part when V_{CC} is less than V_L . The state of I/O V_{CC} and I/O V_L during shutdown is chosen by selecting the appropriate part version (see *Ordering Information/Selector Guide*).

The MAX13030E–MAX13035E accept V_{CC} voltages from +2.2V to +3.6V and V_L voltages from +1.62V to +3.2V, making them ideal for data transfer between low-voltage ASIC/PLDs and higher voltage systems. The MAX13030E–MAX13035E are available in 16-bump UCSP (2mm x 2mm) and 16-pin TQFN (4mm x 4mm) packages, and operate over the extended -40°C to +85°C temperature range.

Applications

- SD Card Level Translation
- MiniSD Card Level Translation
- MMC Level Translation
- Transflash Level Translation
- Memory Stick Card Level Translation

Features

- ◆ Compatible with 4mA Input Drivers or Larger
- ◆ 100Mbps Guaranteed Data Rate
- ◆ Six Bidirectional Channels
- ◆ Clock Return Output (MAX13035E)
- ◆ Enable Input (MAX13030E–MAX13034E)
- ◆ ± 15 kV ESD Protection on I/O V_{CC} Lines
- ◆ $+1.62\text{V} \leq V_L \leq +3.2\text{V}$ and $+2.2\text{V} \leq V_{CC} \leq +3.6\text{V}$ Supply Voltage Range
- ◆ Lead-Free, 16-Bump UCSP (2mm x 2mm) and 16-pin TQFN (4mm x 4mm) Packages

Typical Operating Circuits

Functional Diagram and Pin Configurations appear at end of data sheet.

Ordering Information/Selector Guide

PART	PIN-PACKAGE	I/O V_L STATE DURING SHUTDOWN	I/O V_{CC} STATE DURING SHUTDOWN	PKG CODE
MAX13030EEBE+	16 UCSP	High impedance	High impedance	B16-1
MAX13030EETE+	16 TQFN-EP**	High impedance	High impedance	T1644-4

Note: All devices are specified over the -40°C to +85°C operating temperature range.

+Denotes a lead-free package.

**EP = Exposed paddle.

Ordering Information/Selector guide continued at end of data sheet.

6-Channel High-Speed Logic-Level Translators

ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND.)

V _{CC} , V _L	-0.3V to +4V
I/O V _{CC} , CLK_V _{CC}	-0.3V to (V _{CC} + 0.3V)
I/O V _L , CLK_V _L , CLK_RET	-0.3V to (V _L + 0.3V)
EN	-0.3V to +4V
Short-Circuit Duration I/O V _L , I/O V _{CC} , CLK_V _{CC} , CLK_V _L , CLK_RET to GND	Continuous
Continuous Power Dissipation (T _A = +70°C)	
16-Bump UCSP (derate 8.2mW/°C)	660mW
16-Pin TQFN (derate 25.0mW/°C)	2000mW

Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-65°C to +150°C
Junction Temperature	+150°C
Bump Temperature (soldering)	+235°C
Lead Temperature (soldering, 10s)	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V_{CC} = +2.2V to +3.6V, V_L = +1.62V to +3.2V, EN = V_L, T_A = -40°C to +85°C, unless otherwise noted. Typical values are at V_{CC} = +3.3V, V_L = +1.8V and T_A = +25°C.) (Notes 1, 2)

6-Channel High-Speed Logic-Level Translators

Detailed Description

The MAX13030E-MAX13035E 6-channel, bidirectional level translators provide the level shifting necessary for 100Mbps data transfer in multivoltage systems. The MAX13030E-MAX13035E are ideally suited for memory card level translation, as well as generic level translation in systems with six channels. Externally applied voltages, V_{CC} and V_L , set the logic levels on either side of the device. Logic signals present on the V_L side of the device appear as a higher voltage logic signal on the V_{CC} side of the device, and vice versa. The MAX13035E features a CLK_RET output that returns the same clock signal applied to the CLK_ V_L input.

The MAX13030E-MAX13035E operate at full speed with external drivers that source as little as 4mA output current. Each I/O channel is pulled up to V_{CC} or V_L by an internal 30 μ A current source, allowing the MAX13030E-MAX13035E to be driven by either push-pull or open-drain drivers.

The MAX13030E-MAX13034E feature an enable (EN) input that places the device into a low-power shutdown mode when driven low. The MAX13030E-MAX13035E features an automatic shutdown mode that disables the part when V_{CC} is less than V_L . The state of I/O $V_{CC_}$ and I/O $V_{L_}$ during shutdown is chosen by selecting the appropriate part version (see *Ordering Information/Selector Guide*).

The MAX13030E-MAX13035E accept V_{CC} voltages from +2.2V to +3.6V and V_L voltages from +1.62V to +3.2V.

Level Translation

For proper operation, ensure that $+2.2V \leq V_{CC} \leq +3.6V$, and $+1.62V \leq V_L \leq V_{CC} - 0.2V$. When power is supplied to V_L while V_{CC} is either missing or less than V_L , the MAX13030E-MAX13035E automatically enters a low-power mode. In addition, the MAX13030E-MAX13034E enters a low-power mode if EN = 0V. This allows V_{CC} to be disconnected and still have a known state on I/O $V_{L_}$. The maximum data rate depends heavily on the load capacitance (see the *Typical Operating Characteristics Rise/Fall Times*), output impedance of the driver, and the operating voltage range.

Input Driver Requirements

The MAX13030E-MAX13035E architecture is based on an nMOS pass gate and output accelerator stages (see Figure 6). Output accelerator stages are always in tri-state mode except when there is a transition on any of the translators on the input side, either I/O $V_{L_}$, CLK_ V_L , I/O $V_{CC_}$, or CLK_ V_{CC} . A short pulse is then generated during which the output accelerator stages become active and charge/discharge the capacitances at the I/Os. Due to its architecture, both input stages become

Figure 6. Simplified Functional Diagram for One I/O Line

active during the one-shot pulse. This can lead to some current feeding into the external source that is driving the translator. However, this behavior helps to speed up the transition on the driven side.

The MAX13030E-MAX13035E have internal current sources capable of sourcing 30 μ A to pullup the I/O lines. These internal pullup current sources allow the inputs to be driven with open-drain drivers, as well as push-pull drivers. It is not recommended to use external pullup resistors on the I/O lines. The architecture of the MAX13030E-MAX13035E permit either side to be driven with a minimum of 4mA drivers or larger.

Output Load Requirements

The MAX13030E-MAX13035E I/O are designed to drive CMOS inputs. Do not load the I/O lines with a resistive load less than 25k Ω and do not place an RC circuit at the input of these devices to slow down the edges. If a slower rise/fall time is required, refer to the MAX3000E/MAX3001E logic-level translator datasheet. For I²C level translation, refer to the MAX3372E-MAX3379E/MAX3390E-MAX3393E datasheet.

Shutdown Mode

The MAX13030E-MAX13034E feature an enable (EN) input that places the device into a low-power shutdown mode when driven low. The MAX13030E-MAX13035E features an automatic shutdown mode that disables the part when V_{CC} is missing or less than V_L .

6-Channel High-Speed Logic-Level Translators

Clock Return (CLK_RET)

The MAX13035E features a CLK_RET output that returns the clock signal applied to CLK_VL. CLK_VL and CLK_VCC are identical to the other I/O channels, the only difference being that CLK_VCC is internally tied to the VCC side of CLK_RET (see the *Functional Diagram*).

Application Information

Layout Recommendations

Use standard high-speed layout practices when laying out a board with the MAX13030E–MAX13035E. For example, to minimize line coupling, place all other signal lines not connected to the MAX13030E–MAX13035E at least 1x the substrate height of the PCB away from the input and output lines of the MAX13030E–MAX13035E.

Power-Supply Decoupling

To reduce ripple and the chance of introducing data errors, bypass VL and VCC to ground with 0.1µF ceramic capacitors. Place all capacitors as close as possible to the power-supply inputs. For full ESD protection, bypass VCC with a 1µF ceramic capacitor located as close as possible to the VCC input.

Unidirectional vs. Bidirectional Level Translator

The MAX13030E–MAX13035E bidirectional level translators can operate as a unidirectional device to translate signals without inversion. These devices provide the smallest solution (UCSP package) for unidirectional level translation without inversion.

Use with External Pullup/Pulldown Resistors

Due to the architecture of the MAX13030E–MAX13035E, it is not recommended to use external pullup or pulldown resistors on the bus. In certain applications, the use of external pullup or pulldown resistors is desired to have a known bus state when there is no active driver on the bus. For example, this may happen when interfacing to a memory card slot with no memory card inserted. The MAX13030E–MAX13035E include internal pullup current sources that set the bus state when the device is enabled. In shutdown mode, the state of I/O VCC_ and I/O VL_ is dependent on the selected part version (see *Ordering Information/Selector Guide* for further information).

Open-Drain Signaling

The MAX13030E–MAX13035E are designed to pass open-drain as well as CMOS push-pull signals. When used with open-drain signaling, the rise time is dominated by the interaction of the internal pullup current source and the parasitic load capacitance. The MAX13030E–MAX13035E include internal rise time accelerators to speed up transitions, eliminating any need for external pullup resistors.

SD Card Detection

SD, MiniSD, MMC and similar types of cards provide detection of a card through a pullup resistor on one of the DAT lines, or by use of a mechanical switch. This pullup resistor is internal to the memory card itself. The MAX13030E–MAX13035E only support detection of a memory card through a mechanical switch, and it is recommended that the internal resistor for card detection be switched off by the command interface. For example, when using SD cards, the command SET_CLR_CARD_DETECT (ACMD42) disables this resistor.

UCSP Applications Information

For the latest application details on UCSP construction, dimensions, tape carrier information, PCB techniques, bump-pad layout, and recommended reflow temperature profiles, as well as the latest information on reliability testing results, go to Maxim's web site at www.maxim-ic.com/ucsp to find the Application Note: *UCSP – A Wafer-Level Chip-Scale Package*.

NOTES:

- DIMENSIONING & TOLERANCING CONFORM TO ASME Y14.5M-1994.
- ALL DIMENSIONS ARE IN MILLIMETERS. ANGLES ARE IN DEGREES.
- N IS THE TOTAL NUMBER OF TERMINALS.
- THE TERMINAL #1 IDENTIFIER AND TERMINAL NUMBERING CONVENTION SHALL CONFORM TO JEDEC 95-1 SFP-012. DETAILS OF TERMINAL #1 IDENTIFIER ARE OPTIONAL, BUT MUST BE LOCATED WITHIN THE ZONE INDICATED. THE TERMINAL #1 IDENTIFIER MAY BE EITHER A MOLD OR MARKED FEATURE.
- DIMENSION b APPLIES TO METALLIZED TERMINAL AND IS MEASURED BETWEEN 0.25 mm AND 0.30 mm FROM TERMINAL TP.
- ND AND NE REFER TO THE NUMBER OF TERMINALS ON EACH D AND E SIDE RESPECTIVELY.
- DEPOPULATION IS POSSIBLE IN A SYMMETRICAL FASHION.
- COPLANARITY APPLIES TO THE EXPOSED HEAT SINK SLUG AS WELL AS THE TERMINALS.
- DRAWING CONFORMS TO JEDEC MO220, EXCEPT FOR T2444-3, T2444-4 AND T2844-1.
- MARKING IS FOR PACKAGE ORIENTATION REFERENCE ONLY.
- COPLANARITY SHALL NOT EXCEED 0.08mm
- WARPAGE SHALL NOT EXCEED 0.10mm
- LEAD CENTERLINES TO BE AT TRUE POSITION AS DEFINED BY BASIC DIMENSION "e", ±0.05.
- NUMBER OF LEADS SHOWN ARE FOR REFERENCE ONLY

DALLAS SEMICONDUCTOR MAXIM

TITLE: PACKAGE OUTLINE, 12, 16, 20, 24, 28L THIN QFN, 4x4x0.8mm
