

## V.34, V.17 FAX ISOMODEM<sup>®</sup> WITH GLOBAL DAA

### Features

- Fax modem formats
  - V.29, V.27ter, V.17, V.21 channel 2
  - V.34 half duplex
  - Automatic rate negotiation
- Supports type I and II caller ID
- No external ROM or RAM required
- Distinctive ring detection
- UART or parallel interface
- Lead-free/RoHS-compliant packages available
- Integrated DAA
  - Over 6000 V capacitive isolation
  - Parallel phone detect
  - Globally-compliant line interface
  - Overcurrent detection
- Firmware upgradeable
- DTMF detection/generation
- Data/Fax discriminator
- Class1 AT command set

### Applications

- Fax machines
- Fax telephones
- Multifunctional printers
- Fax server

### Description

The Si2435 and Si2417 are complete two-chip fax modems ranging in speed from 33,600 bps to 14,400 bps. The ISOModem chipsets utilize Silicon Laboratories' third-generation direct access arrangement (DAA) to provide a globally-programmable telephone line interface with an unparalleled level of integration. Available in two small packages, the compact solutions eliminate the need for a separate DSP, modem controller, codec, isolation transformer, relay, opto-isolators, and 2–4 wire hybrid. The ISOModem provides conventional fax formats with connect rates of up to 33,600 bps over the Public Switched Telephone Network (PSTN). The Si2435 and Si2417 are ideal for fax modem applications due to their global compliance, small footprint, and minimal external component count.

# Si2435/Si2417

## 1. Electrical Specifications

**Table 1. Recommended Operating Conditions**

Parameter <sup>1</sup>	Symbol	Test Condition	Min <sup>2</sup>	Typ	Max <sup>2</sup>	Unit
Ambient Temperature	$T_A$	F-Grade	0	25	70	°C
Si2435/17 Supply Voltage, Digital <sup>3</sup>	$V_D$		3.0	3.3	3.6	V

**Notes:**

- The Si2435/17 specifications are guaranteed when the typical application circuit (including component tolerance) and any Si2435/17 and any Si3018 are used. See "2. Typical Application Schematic" on page 10.
- All minimum and maximum specifications are guaranteed and apply across the recommended operating conditions. Typical values apply at nominal supply voltages and an operating temperature of 25 °C unless otherwise stated.
- The digital supply,  $V_D$ , operates from 3.0 to 3.6 V. The Si2435/17 interface supports 5 V logic (CLKIN/XTALI supports 3.3 V logic only).

**Table 2. Loop Characteristics**

( $V_D = 3.0$  to  $3.6$  V,  $T_A = 0$  to  $70$  °C for F-Grade)

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
DC Termination Voltage	$V_{TR}$	$I_L = 20$ mA, ILIM <sup>1</sup> = 0 DCV = 00, MINI = 11, DCR = 0	—	—	6.0	V
DC Termination Voltage	$V_{TR}$	$I_L = 120$ mA, ILIM = 0 DCV = 00, MINI = 11, DCR = 0	9	—	—	V
DC Termination Voltage	$V_{TR}$	$I_L = 20$ mA, ILIM = 0 DCV = 11, MINI = 00, DCR = 0	—	—	7.5	V
DC Termination Voltage	$V_{TR}$	$I_L = 120$ mA, ILIM = 0 DCV = 11, MINI = 00, DCR = 0	9	—	—	V
DC Termination Voltage	$V_{TR}$	$I_L = 20$ mA, ILIM = 1 DCV = 11, MINI = 00, DCR = 0	—	—	7.5	V
DC Termination Voltage	$V_{TR}$	$I_L = 60$ mA, ILIM = 1 DCV = 11, MINI = 00, DCR = 0	40	—	—	V
DC Termination Voltage	$V_{TR}$	$I_L = 50$ mA, ILIM = 1 DCV = 11, MINI = 00, DCR = 0	—	—	40	V
On-Hook Leakage Current	$I_{LK}$	$V_{TR} = -48$ V	—	—	5	μA
Operating Loop Current	$I_{LP}$	MINI = 00, ILIM = 0	10	—	120	mA
Operating Loop Current	$I_{LP}$	MINI = 00, ILIM = 1	10	—	60	mA
DC Ring Current		DC current flowing through ring detection circuitry	—	1.5	3	μA
Ring Detect Voltage <sup>2</sup>	$V_{RD}$	RT = 0	12	15	18	$V_{RMS}$
Ring Detect Voltage <sup>2</sup>	$V_{RD}$	RT = 1	18	21	25	$V_{RMS}$
Ring Frequency	$F_R$		15	—	68	Hz
Ringer Equivalence Number	REN		—	—	0.2	

**Notes:**

- ILIM = U67, bit 9; DCV = U67, bits 3:2; MINI = U67, bits 13:12; DCR = U67, bit 7; RT = U67, bit 0.
- The ring signal is guaranteed to not be detected below the minimum. The ring signal is guaranteed to be detected above the maximum.

**Table 4. AC Characteristics**

( $V_D = 3.0$  to  $3.6$  V,  $T_A = 0$  to  $70$  °C for F-Grade,  $F_s = 8$  kHz)

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Clock Input Frequency	$F_{XTL}$	default	—	4.9152	—	MHz
Clock Input Frequency	$F_{XTL}$	$\leq 10$ k $\Omega$ resistor between pin 23 and GND	—	27	—	MHz
Receive Frequency Response		Low -3 dBFS Corner, FILT = 0	—	5	—	Hz
Receive Frequency Response		Low -3 dBFS Corner, FILT = 1	—	200	—	Hz
Transmit Full Scale Level <sup>1</sup>	$V_{FS}$		—	1.1	—	$V_{PEAK}$
Receive Full Scale Level <sup>1,2</sup>	$V_{FS}$		—	1.1	—	$V_{PEAK}$
Dynamic Range <sup>3</sup>	DR	ILIM = 0, DCV = 11, MINI = 00 DCR = 0, $I_L = 100$ mA	—	80	—	dB
Dynamic Range <sup>3</sup>	DR	ILIM = 0, DCV = 00, MINI = 11 DCR = 0, $I_L = 20$ mA	—	80	—	dB
Dynamic Range <sup>3</sup>	DR	ILIM = 1, DCV = 11, MINI = 00 DCR = 0, $I_L = 50$ mA	—	80	—	dB
Transmit Total Harmonic Distortion <sup>4</sup>	THD	ILIM = 0, DCV = 11, MINI = 00 DCR = 0, $I_L = 100$ mA	—	-72	—	dB
Transmit Total Harmonic Distortion <sup>4</sup>	THD	ILIM = 0, DCV = 00, MINI = 11 DCR = 0, $I_L = 20$ mA	—	-78	—	dB
Receive Total Harmonic Distortion <sup>4</sup>	THD	ILIM = 0, DCV = 00, MINI = 11 DCR = 0, $I_L = 20$ mA	—	-78	—	dB
Receive Total Harmonic Distortion <sup>4</sup>	THD	ILIM = 1, DCV = 11, MINI = 00 DCR = 0, $I_L = 50$ mA	—	-78	—	dB
Dynamic Range (Caller ID Mode)	$DR_{CID}$	$V_{IN} = 1$ kHz, -13 dBm	—	50	—	dB

**Notes:**

1. Measured at TIP and RING with 600  $\Omega$  termination at 1 kHz, as shown in Figure 1 on page 5.
2. Receive full scale level produces -0.9 dBFS at DTX.
3.  $DR = 20 \times \log |V_{in}| + 20 \times \log (\text{rms signal/rms noise})$ . Applies to both transmit and receive paths.  $V_{in} = 1$  kHz, -3 dBFS.
4.  $V_{in} = 1$  kHz, -3 dBFS.  $THD = 20 \times \log (\text{rms distortion/rms signal})$ .

Table 5. Absolute Maximum Ratings

Parameter	Symbol	Value	Unit
DC Supply Voltage	$V_D$	4.1	V
Input Current, Si2435/17 Digital Input Pins	$I_{IN}$	$\pm 10$	mA
Digital Input Voltage	$V_{IND}$	-0.3 to 5.3	V
CLKIN/XTALI Input Voltage	$V_{XIND}$	-0.3 to ( $V_D + 0.3$ )	V
Operating Temperature Range	$T_A$	-10 to 100	°C
Storage Temperature Range	$T_{STG}$	-40 to 150	°C

**Note:** Permanent device damage may occur if the above absolute maximum ratings are exceeded. Functional operation should be restricted to the conditions as specified in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

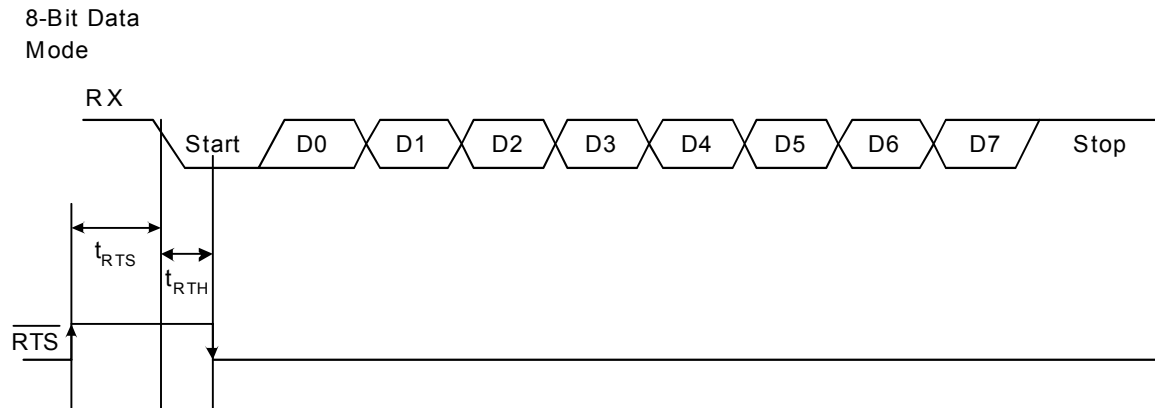

Table 6. Switching Characteristics

( $V_D = 3.0$  to  $3.6$  V,  $T_A = 0$  to  $70$  °C for F-Grade)

Parameter	Symbol	Min	Typ	Max	Unit
CLKOUT Output Clock Frequency		2.048	—	49.152	MHz
Baud Rate Accuracy	$t_{BD}$	-1	—	1	%
Start Bit $\downarrow$ to $\overline{RTS} \downarrow$	$t_{RTH}$	—	$1/(2 \times \text{Baud Rate})$	—	ns
$\overline{CTS}$ or $\overline{RTS} \uparrow$ High to Start Bit $\downarrow$	$t_{RTS}$	10	—	—	ns
Stop Bit $\uparrow$ to $\overline{CTS} \uparrow$	$t_{CTH}$	—	—	—	ns
$\overline{RESET} \downarrow$ to $\overline{RESET} \uparrow$	$t_{RS}$	5.0	—	—	ms
$\overline{RESET} \uparrow$ to 1st AT Command	$t_{AT}$	300	—	—	ms
Address Setup	$t_{AS}$	15	—	—	ns
Address Hold	$t_{AH}$	0	—	—	ns
$\overline{WR}$ Low Pulse Width	$t_{WL}$	50	—	—	ns
Write Data Setup Time	$t_{WDSU}$	20	—	—	ns
Write Cycle Time	$t_{WC}$	120	—	—	ns
Chip Select Setup	$t_{CSS}$	10	—	—	ns
Chip Select Hold	$t_{CSH}$	0	—	—	ns
$\overline{RD}$ Low Pulse Width	$t_{RL}$	50	—	—	ns
$\overline{RD}$ Low to Data Driven Time	$t_{RLDD}$	—	—	20	ns
Data Hold	$t_{DH}$	10	—	—	ns
$\overline{RD}$ High to Hi-Z Time	$t_{DZ}$	—	—	30	ns
Read Cycle Time	$t_{RC}$	120	—	—	ns

**Note:** All timing is referenced to the 50% level of the waveform. Input test levels are  $V_{IH} = V_D - 0.4$  V,  $V_{IL} = 0.4$  V

U1	Si2435/17	Silicon Labs
U2	Si3018	Silicon Labs
Y1 <sup>1,5</sup>	4.9152 MHz, 20 pF, 100 ppm, 150 Ω ESR	ECS Inc., Siward
Z1	Zener Diode, 43 V, 1/2 W, BZT84C43	On Semi

**Notes:**

1. In STB applications, C40, C41, and Y1 can be removed by using the 27 MHz clock input feature.
2. Several diode bridge configurations are acceptable. For example, a single DF04S or four 1N4004 diodes may be used.
3. 56 Ω, 1/16 W, 1% resistors may be substituted for R12–R13 (0 Ω) to decrease emissions.
4. Murata BLM21AG601SN1 may be substituted for R15–R16 (0 Ω) to decrease emissions.
5. To ensure compliance with ITU specifications, frequency tolerance must be less than 100 ppm including initial accuracy, 5-year aging, 0 to 70 °C, and capacitive loading. 50 ppm initial accuracy crystals typically satisfy this requirement.

## 4. Functional Description

The Si2435/17 ISModem<sup>®</sup> is a complete embedded fax modem chipset with integrated direct access arrangement (DAA) that provides a programmable line interface to meet global telephone line requirements. Available in two small packages, this solution includes a DSP data pump, modem controller, on-chip RAM and ROM, codec, DAA, analog output, and 27 MHz clock input.

The Si2435/17 ISModem is a full-featured fax modem chipset offering ITU-T T.31 compliant class 1 commands with fax connect rates up to 33.6/14.4 kbps over the Public Switched Telephone Network (PSTN).

The ISModem provides numerous additional features for fax modem applications. The modem includes full type I caller ID and type II caller ID in snoop mode for global standards, a data/fax call discriminator, DTMF tone generation and detection, and call progress monitoring. The modem is also programmable to meet global settings. Because the Si2435/17 ISModem integrates the DAA, analog features, such as parallel phone detect, overcurrent detection, and global PTT compliance with a single design, are included.

This device is ideal for fax modem applications due to its small board space, low power consumption, and global compliance. The Si2435/17 solution includes a silicon DAA using Silicon Laboratories' proprietary third-generation DAA technology. This highly-integrated DAA can be programmed to meet worldwide PTT specifications for ac termination, dc termination, ringer impedance, and ringer threshold. In addition, the Si2435/17 has been designed to meet the most stringent worldwide requirements for out-of-band energy, billing-tone immunity, surge immunity, and safety requirements.

The Si2435/17 provides a serial interface that can directly communicate to either a microcontroller via a UART interface or a PC via an RS-232 port. This interface allows for PC evaluation of the modem immediately upon powerup via the AT commands using standard terminal software. The Si2435/17 also provides an 8-bit parallel port.

### 4.1. Digital Interface

The Si2435/17 digital I/O can communicate via either a serial UART interface with flow control or via a parallel 8-bit interface.

Selection of a serial or parallel I/O interface is determined by the state of  $\overline{\text{AOUT/INT}}$  (Si2435/17, pin 15) during the rising edge of  $\overline{\text{RESET}}$ . An internal pullup resistor forces the default state to serial mode operation. An external 10 k $\Omega$  pulldown resistor can be

connected to  $\overline{\text{AOUT/INT}}$  to force selection of parallel mode (see Table 8). Configuration of pins 3, 4, 8–11, 15–18, and 22–24 is determined by this interface selection.

### 4.2. Serial Interface

The Si2435/17 supports asynchronous serial communication with data terminal equipment (DTE) at rates up to 307.2 kbps with the standard serial UART format. Upon powerup, the UART baud rate is automatically detected using the autobaud feature.

The serial interface also provides a hardware pin,  $\overline{\text{DCD}}$  (data carrier detect), which remains low as long as the ISModem is connected.

The  $\overline{\text{INT}}$  interrupt pin can be programmed to alert the host of changes to the interrupts listed in I/O Control 0 (U70).

#### 4.2.1. Autobaud

The Si2435/17 includes an automatic baud rate detection feature that allows the host to start transmitting data at any standard DTE rate from 300 bps to 307.2 kbps.

### 4.3. Parallel Interface

The parallel interface is an 8-bit data bus with a single bit address. Figure 3 on page 9 shows the required timing for the parallel interface.

If  $\text{A0} = 0$ , the data bus represents a read/write to the "Parallel Interface 0 (0x00)" register on page 56. If  $\text{A0} = 1$ , the data bus represents a read/write to the "Parallel Interface 1 (0x01)" register on page 57). See "AN60: Si2493/57/34/15/04 Parallel Interface Software" for details.

### 4.4. Command State

In command state, the ISModem is ready to accept commands from the host and is not communicating with a remote modem. Data signals from the host are treated as command lines, processed by the ISModem, and then, if appropriate, responses are sent back to the host. The command state is entered upon power-up and when a call is disconnected and is available in data mode, fax mode, or voice mode.

### 4.5. Data State

In data state, the ISModem is communicating with a remote modem. Data signals sent from the host are treated as data and transmitted to the remote modem via the ISModem, and data received from the remote modem are delivered via the ISModem to the host. Data and control signals are monitored by the ISModem to detect events, such as loss of the remote

connection and requests for disconnection or switching to command state. The data state is entered by successful completion of a command to originate or answer a call. For the Si2435/17 ISModem, data state is only operational in fax mode.

## 4.6. Data Mode (+FCLASS = 0)

The Si2435/17 has limited data mode support. In data mode, the Si2435/17 ISModem can be used for modem initialization and to detect incoming signals such as ringing and caller ID. The Si2435/17 does not support data modulations. If data modes are required, use the Si2457/34/15/04/01 ISModem family of devices. Data mode is enabled by the AT command, +FCLASS = 0, and is the default mode of operation.

## 4.7. Fax Mode (+FCLASS = 1)

The Si2435/17 fax ISModem supports super G3 (Si2435 only) and G3 fax communication. In fax mode, the Si2435 and Si2417 ISModem can answer or originate fax calls for speeds up to 33.6 kbps and 14.4 kbps respectively. Fax communication is supported through standard EIA/TIA 578 and ITU-T T.31 Class 1 AT commands, such as +FTM, +FRM, +FTH, +FRH, and +F34 (see Table 10 on page 18). Fax mode is enabled by the AT command +FCLASS = 1.

## 4.8. Voice Mode (+FCLASS = 8)

The Si2435/17 supports a voice mode. In voice mode, the ISModem monitors the telephone line for several events, such as DTMF detection, caller ID, and ringing tone. Once these events are detected, the ISModem will send either a simple event code (a single character) or a complex event code (multiple characters) preceded by a <DLE> character to the host. For a full list event reporting see Table 9. In voice mode, the ISModem can also generate DTMF and single tones using the +VTS command.

Voice mode is enabled by the AT command +FCLASS = 8. In voice mode, the +VLS command is used to enable event reporting and tone generation and to control the on/off hook state. Table 9 lists the events that are supported based on the +VLS state.

## 4.9. V.8 Call Establishment (Si2435 Only)

The Si2435 supports V.8 call establishment. Using the V.8 protocol, the Si2435 fax ISModem automatically negotiates with the remote modem for the best possible operational mode and speed. Upon successful V.34HD call establishment, the Si2435 will echo a "+F34: <rate>" response code prior to the CONNECT message.

To ensure interoperability with legacy G3 Fax Machines, if the remote modem does not support V.8, the Si2435 fax ISModem enters the command state to allow the host to initiate G3 operation as described in T.30. The Si2435 echoes an "OK" response code signifying the entrance to the command state. If enabled, the +A8 response codes can be sent to assist the host in determining the appropriate action.

If a fallback to G3 occurs, the host can optionally command the Si2435 to perform a V.8 retry via the AT+FTH=FSKL or AT+FRH=FSKL command. A V.8 retry allows for a possible transition back to V34HD Fax operation if V.8 negotiation fails, for instance, due to an ANSam misdetection during a manual call establishment described in the T.30 standard.

## 4.10. Data / Fax / Voice Discriminator

The Si2435/17 supports data/fax/voice discrimination via tone detection. In voice mode (+FCLASS = 8), if tone detection is enabled, the ISModem will report a "c" when fax calling tones are detected (1100 Hz). The ISModem will report an "e" when data calling tones are detected (1300 Hz). A "q" is reported when no tones are present for a preset amount of time. This "quiet" detection is generally perceived as a voice call. Using these event reports, the host can distinguish between a voice, data, or fax call.

## 4.11. DTMF Detection / Generation

The Si2435/17 provides comprehensive DTMF tone generation and detection. The ISModem can generate single tones or DTMF tones using the +VTS command. DTMF tones may also be generated during dialing using the "ATDT" command. DTMF detection is only available in voice mode (FCLASS = 8). DTMF digits are reported from the modem to the host using <DLE> shielding.

## 4.12. Caller ID Operation

The Si2435/17 fax ISModem supports global caller ID decode including US Bellcore, European ETSI, UK, Japanese, and DTMF protocols. The caller ID type is set using the +VCDT command. For example, +VCDT = 0 is Bellcore, +VCDT = 2 is UK and +VCDT = 3 is Japan caller ID mode. In addition, the Si2435/17 has an "always on" caller ID mode (+VCDT = 1), which snoops the line for data. This mode can be used for type II caller ID or non-standard caller ID implementations. The +VCID command is used to enable or disable caller ID formatting (see Table 10 on page 18 for more details).

## 4.13. Parallel Phone Detection

In voice mode, the Si2435/17 ISModem will automatically and unobtrusively detect when another telephone, modem, or other device is using the phone line. The ISModem will echo a <DLE>"P" if a remote device goes off-hook and will echo a <DLE>"p" when the remote device goes back on-hook. This allows the host to avoid interrupting another phone call when the phone line is already in use and to intelligently handle an interruption when the ISModem is utilizing the phone line.

## 4.14. Overcurrent Detection

The Si2435/17 includes an overcurrent detection feature that measures the loop current at a programmable time after the Si2435/17 goes off-hook. This allows the Si2435/17 to detect if it is connected to an improper telephone line. The overcurrent detection feature may be enabled by setting the OCDM bit (U70, bit 11). OHT (U77, bits 8:0) sets the delay after off-hook until the loop current is measured.

## 4.15. Global Operation

The Si2435/17 chipset contains an integrated silicon direct access arrangement (DAA) that provides a programmable line interface to meet international telephone line interface requirements.

Additionally, the user-access registers (via the AT:U and AT:R commands) may be programmed for country-specific settings, such as dial tone, ring, ringback, and busy tone.

## 4.16. Clocking

The Si2435/17 contains an on-chip phase-locked loop (PLL) and clock generator. Using either a single crystal or master clock input, the Si2435/17 can generate all the internal clocks required to support the featured modem protocols. Either a 27 MHz or 4.9152 MHz clock (3.3 V max input—see Table 5 on page 7) on XTALI or a 4.9152 MHz crystal across XTALI and XTALO form the master clock ( $\pm 100$  ppm max) for the ISModem. This

clock source is sent to an internal PLL that generates all necessary internal system clocks including the DSP clock.

By default, the Si2435/17 assumes a 4.9152 MHz clock input. If a 27 MHz clock on XTALI is used with the serial (UART) interface, a pulldown resistor  $\leq 10$  k $\Omega$  must be placed between DCD (pin 23) and GND. If a 27 MHz clock on XTALI is used with the parallel interface, a pulldown resistor  $\leq 10$  k $\Omega$  must be placed between CTS/CS (pin 11) and GND and AOUT/INT and GND (see Table 8).

Table 8. Pulldown Selector

Mode	Serial I/O	Parallel I/O
4.9152 MHz CLK	Default	Pin 15
27 MHz CLK	Pin 23	Pin 11, 15

## 4.17. Low-Power Modes

In order to reduce power consumption, the Si2435/17 fax ISModem may be placed in a wake-on-ring/sleep mode, or a complete powerdown mode. The sleep mode may be entered via the AT&Z command. Once the AT&Z command is issued, the ISModem will remain in sleep mode until either a ring is detected (triggering the INT pin and toggling the Ring Indicator (RI) bit low in U70) or a write to the TX FIFO. The ISModem may also be wakened out of sleep mode by a caller ID event.

Alternately, using the S24 S-register, the Si2435/17 can be set to automatically enter sleep mode after a pre-programmed time of inactivity with either the DTE or the remote modem. The sleep mode is entered after (S24) seconds have passed since the TX FIFO has been empty. Complete powerdown is accomplished via U65[13] (PDN). Once the PDN bit is written, the Si2435/17 completely powers down and can only be powered back on via the RESET pin.

Table 9. V.253 Event Reporting in Voice Mode

Event Description	Reporting	+VLS
Caller Id Report	Complex	0,4,20,21
Distinctive Ringing	Complex	0,4,20,21
RING	R	0,4,20,21
DTMF Received	1-9,A-D,*,#	1,5,20,21
Facsimile Calling (e.g. 1100 Hz)	c	1,5,20,21
Data Calling (e.g. 1300 Hz)	e	1,5,20,21
Presumed End of Message (QUIET) Time-out	q	1,5,20,21
Loop Current Interruption	l	1,5,20,21
Ringing Tone	r	1,5,20,21
BUSY	b	1,5,20,21
DIALTONE	d	1,5,20,21
Extension Phone On-hook	p	0,1,4,5,20,21
Extension Phone Off-hook	P	0,1,4,5,20,21
Facsimile or Data Answer (e.g. 2100 Hz)	a	1,5,20,21
Data Answer (e.g. 2225 Hz)	f	1,5,20,21

#### 4.18. Firmware Upgrades

The Si2435/17 contains an on-chip program ROM that includes the firmware required for the features listed in this data sheet. In addition, the Si2435/17 contains on-chip program RAM to accommodate minor changes to the firmware. This allows Silicon Labs to provide future firmware updates to optimize the characteristics of new modem designs and those already deployed in the field.

#### 4.19. Codec Interface

The Si2435/17 includes an optional serial interface that connects to an external voice codec (Si3000) for handset support.

#### 4.20. AT Commands

At powerup, the Si2435/17 is in the AT command mode. In command mode, the modem monitors the input (serial or parallel) checking constantly for a valid command (AT commands are described in Table 10.)

**Table 10. Basic AT Command Set (Command Defaults in Bold)**

Command	Action																		
\$	Display AT command mode settings.																		
A	Answer incoming call																		
A/	Re-execute last command. This is the only command not preceded by “AT” or followed by a <CR>.																		
Dn	<p>Dial</p> <p>The dial command, followed by 1 or more dial command modifiers, manually dials a phone number:</p> <table border="1"> <thead> <tr> <th>Modifier</th> <th>Function</th> </tr> </thead> <tbody> <tr> <td>! or &amp;</td> <td>Flash hook switch for FHT (U4F) ms (default: 500 ms)</td> </tr> <tr> <td>, or &lt;</td> <td>Pause before continuing for S8 seconds (default: 2 seconds)</td> </tr> <tr> <td>;</td> <td>Return to AT command mode</td> </tr> <tr> <td>@</td> <td>Wait for silence.</td> </tr> <tr> <td>L</td> <td>Redial last number.</td> </tr> <tr> <td>P</td> <td>Pulse (rotary) dialing—pulse digits: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9</td> </tr> <tr> <td>T</td> <td>Tone (DTMF) dialing—DTMF digits: *, #, A, B, C, D, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9.</td> </tr> <tr> <td>W</td> <td> <p>Wait for dial tone before continuing for S14 seconds (default: 12 seconds). Blind dialing modes X0, X1 and X3 do not affect the W command.</p> <p>If the DOP bit (U7A, bit 7) is set, the “ATDTW” command will cause the ISOmodem® to pause dialing and either report an “OK” if a dialtone is detected or “NO DIALTONE” if a dial tone is not detected.</p> </td> </tr> </tbody> </table>	Modifier	Function	! or &	Flash hook switch for FHT (U4F) ms (default: 500 ms)	, or <	Pause before continuing for S8 seconds (default: 2 seconds)	;	Return to AT command mode	@	Wait for silence.	L	Redial last number.	P	Pulse (rotary) dialing—pulse digits: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9	T	Tone (DTMF) dialing—DTMF digits: *, #, A, B, C, D, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9.	W	<p>Wait for dial tone before continuing for S14 seconds (default: 12 seconds). Blind dialing modes X0, X1 and X3 do not affect the W command.</p> <p>If the DOP bit (U7A, bit 7) is set, the “ATDTW” command will cause the ISOmodem® to pause dialing and either report an “OK” if a dialtone is detected or “NO DIALTONE” if a dial tone is not detected.</p>
Modifier	Function																		
! or &	Flash hook switch for FHT (U4F) ms (default: 500 ms)																		
, or <	Pause before continuing for S8 seconds (default: 2 seconds)																		
;	Return to AT command mode																		
@	Wait for silence.																		
L	Redial last number.																		
P	Pulse (rotary) dialing—pulse digits: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9																		
T	Tone (DTMF) dialing—DTMF digits: *, #, A, B, C, D, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9.																		
W	<p>Wait for dial tone before continuing for S14 seconds (default: 12 seconds). Blind dialing modes X0, X1 and X3 do not affect the W command.</p> <p>If the DOP bit (U7A, bit 7) is set, the “ATDTW” command will cause the ISOmodem® to pause dialing and either report an “OK” if a dialtone is detected or “NO DIALTONE” if a dial tone is not detected.</p>																		
En	Local DTE echo																		
E0	Disable																		
<b>E1</b>	<b>Enable</b>																		
Hn	Hook switch.																		
H0	Go on-hook (hang up modem).																		
H1	Go off-hook.																		
In	Identification and checksum.																		
I0	<p>Display Si2435/17 revision code.</p> <p>A: Revision A</p> <p>B: Revision B, etc.</p>																		
I1	Display Si2435/17 firmware revision code (numeric).																		
I3	<p>Display line-side revision code.</p> <p>18F = Si3018 revision F</p>																		
I6	<p>Display the ISOmodem® model number.</p> <p>“2417” = Si2417</p> <p>“2435” = Si2435</p>																		
I7	Diagnostic results 1.																		
<p><b>*Note:</b> This command should only be issued when the Si2435/17 is off-hook.</p>																			

Table 10. Basic AT Command Set (Command Defaults in Bold) (Continued)

Command	Action
I8	Diagnostic results 2.
Ln	Speaker volume operation
L1	Low speaker volume
L2	Medium speaker volume
L3	High speaker volume
Mn	Speaker operation (via AOUT).
<b>M0</b>	<b>Speaker is always off.</b>
M1	Speaker is on while dialing and handshaking; off in data mode.
M2	Speaker is always on.
M3	Speaker is off while dialing, on during handshaking and retraining.
Qn	Response mode.
<b>Q0</b>	<b>Enable result codes (see Table 12 on page 30)</b>
Q1	Disable result codes (enable quiet mode).
Sn	S-register operation (see Table 13 on page 32).
S\$	List contents of all S registers.
Sn?	Display contents of S-register n.
Sn=x	Set S-register n to value x (where n and x are decimal values).
Vn	Result code type (see Table 12 on page 30).
V0	Numeric result codes.
<b>V1</b>	<b>Verbal result codes</b>
Xn	Call Progress Monitor (CPM)—This command controls which CPM signals are monitored and reported to the host from the Si2435/17. (See Table 12 on page 30.)
X0	Basic results; disable CPM—Blind dial (does not wait for dial tone). CONNECT message does not include speed.
X1	Extended results; disable CPM—Blind dial. CONNECT message includes speed.
X2	Extended results and detect dial tone only—Add dial tone detection to X1 mode. Does not blind dial.
X3	Extended results and detect busy only—Add busy tone detection to X1 mode.
<b>X4</b>	<b>Extended results, full CPM—Full CPM enabled, CONNECT message includes speed.</b>
X5	Extended results—Full CPM enabled including ringback detection. Adds ringback detection to X4 mode.
Z	Hard Reset—This command is functionally equivalent to pulsing the RESET pin low. (See t <sub>AT</sub> in Table 6 on page 7.)
&\$	Display AT& current settings.
&D0	ESC (pin 22) is not used
&D1	<b>ESC (pin 22) escapes to command mode from data mode if also enabled by HES U70, bit 15.</b>
&D2	ESC (pin 22) assertion during a modem connection causes the modem to go on-hook and return to command mode.
<b>*Note:</b> This command should only be issued when the Si2435/17 is off-hook.	

**Table 10. Basic AT Command Set (Command Defaults in Bold) (Continued)**

Command	Action
&D3	ESC (pin 22) assertion causes ATZ command (reset and return OK result code).
&F	Restore factory default settings.
&Pn	Japan pulse dialing
&P0	Configure Si2435/17 for 10 pulse-per-second pulse dialing. For Japan.
&P1	Configure Si2435/17 for 20 pulse-per-second pulse dialing. For Japan.
&Tn	Test mode
&T0	Cancel test mode (Escape to command mode to issue AT&T0). This command will also report the number of bit errors encountered on the previous &T4 or &T5 test.
&T2	Initiate ITU-T V.54 (ANALOO) test. Modulation set by +MS AT command. Test loop is through the DSP (Si2435/17 device) only. ISModem® echoes data from TX pin (Register 0 in parallel mode) back to RX pin (Register 0 in parallel mode).
&T3	Initiate ITU-T V.54 (ANALOO) test. Modulation set by +MS AT command. Test loop is through the DSP (Si2435/17), DAA interface section (Si2435/17), DAA interface (Si3018), and analog hybrid circuit (Si3018). ISModem echoes data from TX pin (Register 0 in parallel mode) back to RX pin (Register 0 in parallel mode). Phone line termination required as in Figure 1. To test only the link operation, the hybrid and AFE codec can be removed from the test loop by setting the DL bit (U62, bit 1).
&T4	Initiate transmit as originating modem with automatic data generation. Modulation, data rate, and symbol rate are set by +MS and S41. Data pattern is set by the S40 register. Continues until the ATH command is sent after an escape into command mode. Data is also demodulated as in ANALOO, and any bit errors are counted to be displayed after the test using &T0.
&T5	Initiate transmit as answering modem with automatic data generation. Modulation, data rate, and symbol rate are set by +MS and S41. Data pattern is set by the S40 register. Continues until the ATH command is sent after an escape into command mode. Data is also demodulated as in ANALOO, and any bit errors are counted to be displayed after the test using &T0.
&T6	Compute checksum for firmware-upgradeable section of program memory. If no firmware upgrade is installed, &T6 returns 0x4474.
&Z	Enter low-power wake-on-ring mode.
\\$	Display AT\ command settings.
\Bn	Character length will be automatically set in autobaud mode
\B0	6N1—six data bits, no parity, one stop bit, one start bit, eight bits total (\N0 only) <sup>1</sup>
\B1	7N1—seven data bits, no parity, one stop bit, one start bit, nine bits total (\N0 only) <sup>1</sup>
\B2	7P1—seven data bits, parity optioned by \P, one stop bit, one start bit, 10 bits total
<b>\B3</b>	<b>8N1—eight data bits, no parity, one stop bit, one start bit, 10 bits total</b>
\B5	8P1—eight data bits, parity optioned by \P, one stop bit, one start bit, 11 bits total (\N0 only)
\B6	8X1—eight data bits, one escape bit, one stop bit, one start bit, 11 bits total (enables ninth-bit escape mode)
\Pn	Parity type will be automatically set in autobaud mode
<b>\P0</b>	<b>Even</b>
*Note: This command should only be issued when the Si2435/17 is off-hook.	

Table 10. Basic AT Command Set (Command Defaults in Bold) (Continued)

Command	Action								
\P1	Space <sup>1</sup>								
\P2	Odd								
\P3	Mark <sup>1</sup>								
\U	Serial mode—causes a low pulse (25 ms) on $\overline{RI}$ and $\overline{DCD}$ . $\overline{INT}$ to be the inverse of ESC. $\overline{RTS}$ to be inverse of $\overline{CTS}$ . Parallel mode—causes a low pulse (25 ms) on $\overline{INT}$ . This command terminates with a $\overline{RESET}$ .								
\Vn	Connect message type								
<b>\V0</b>	<b>Report connect message and protocol message</b>								
\V2	Report connect message only (exclude protocol message)								
\V4	Report connect and protocol message with both upstream and downstream connect rates.								
%%\$	Display AT% command settings.								
%Vn	Automatic Line Status Detection. After the %V1 and %V2 commands are issued, the Si2435/17 will automatically check the telephone connection for whether or not a line is present. If a line is present, the Si2435/17 will automatically check if the line is already in use. Finally, the Si2435/17 will check line status both before going off-hook and again before dialing.								
%V0	<b>Disable automatic line-in-use detection.</b>								
%V1	Automatic Line Status Detection. Description: Before going off-hook with the ATD, ATO, or ATA commands, the Si2435/17 compares the line voltage (via LVS) to registers NOLN (U83) and LIUS (U84):  <table border="0"> <tr> <td><u>Loop Voltage</u></td> <td><u>Action</u></td> </tr> <tr> <td><math>0 \leq LVS \leq NOLN</math></td> <td>Report “NO LINE” and remain on-hook.</td> </tr> <tr> <td><math>NOLN \leq LVS \leq LIUS</math></td> <td>Report “LINE IN USE” and remain on-hook.</td> </tr> <tr> <td><math>LIUS \leq LVS</math></td> <td>Go off-hook and establish a modem connection.</td> </tr> </table> Once the call has begun, the off-hook intrusion algorithm operates normally. In addition, the Si2435/17 will report “NO LINE” if the telephone line is completely disconnected. If the HOI bit (U77, bit 11) is set, “LINE IN USE” is reported upon intrusion.	<u>Loop Voltage</u>	<u>Action</u>	$0 \leq LVS \leq NOLN$	Report “NO LINE” and remain on-hook.	$NOLN \leq LVS \leq LIUS$	Report “LINE IN USE” and remain on-hook.	$LIUS \leq LVS$	Go off-hook and establish a modem connection.
<u>Loop Voltage</u>	<u>Action</u>								
$0 \leq LVS \leq NOLN$	Report “NO LINE” and remain on-hook.								
$NOLN \leq LVS \leq LIUS$	Report “LINE IN USE” and remain on-hook.								
$LIUS \leq LVS$	Go off-hook and establish a modem connection.								
:I	Interrupt Read—This command causes the ISOmodem® to report the lower 8 bits of the interrupt register I/O Control 0 (U70). The CID, OCD, PPD, and RI bits also are cleared, and the INT pin (INT bit in parallel mode) is deactivated on this read.								
:P	Program RAM Write—This command is used to upload firmware supplied by Silicon Labs to the Si2435/17. The format for this command is AT:Paaaa,xxxx,yyyy,.... where aaaa is the first address in hexadecimal and xxxx,yyyy,.... is data in hexadecimal. Only one :P command is allowed per AT command line. No other commands can be concatenated in the :P command line. This command is <i>only</i> for use with special files provided by Silicon Laboratories. Do not attempt to use this command for any other purpose.								
:R	User-Access Register Read—This command allows the user to read from the user-access registers. (See pages 35–55.) The format is “AT:Raa”, where aa = user-access address in hexadecimal. The “AT:R” command causes all the U- registers to be displayed.								
<b>*Note:</b> This command should only be issued when the Si2435/17 is off-hook.									

Table 10. Basic AT Command Set (Command Defaults in Bold) (Continued)

Command	Action
:U	User-Access Register Write—This command allows the user to write to the 16-bit user-access registers. (See page 35.) The format is “AT:Uaa,xxx,yyy,zzz,...” where aa = user-access address in hexadecimal. xxx = Data in hexadecimal to be written to location aa. yyy = Data in hexadecimal to be written to location (aa + 1). zzz = Data in hexadecimal to be written to location (aa + 2). etc.
+A8A : <value>	Answer signal indication <u>&lt;value&gt;</u> <u>Description</u> 0            Indicates that the ISModem timed out waiting for an answering signal 1            Indicates V.8 ANSam signal (2100 Hz with amplitude modulation) 2            Indicates V.25 answer tone (2100 Hz) 5            Indicates sigA signal: V.22bis USB1 signal 6            Indicates sigA signal: V.32bis AC signal
+A8C : <value>	Calling tone indication <u>&lt;value&gt;</u> <u>Description</u> 0            Indicates that the ISModem concluded answer tone transmission without reporting detection of any calling tone 1            Indicates a CNG tone (1100 Hz) 2            Indicates 1300 Hz V.25 data modem calling tone
+A8E = <v8o>,<v8a>	V.8 operation control <u>&lt;v8o&gt;</u> <u>Description</u> <b>1</b> <b>Enable ISModem controlled V.8 origination negotiation</b> 6            Enable ISModem controlled V.8 origination negotiation, issue +A8x indications  <u>&lt;v8a&gt;</u> <u>Description</u> <b>1</b> <b>Enable ISModem controlled V.8 answer negotiation</b> 5            Enable ISModem controlled V.8 answer negotiation, issue +A8x indications
+A8J: <value>	V.8 negotiation complete <u>&lt;value&gt;</u> <u>Description</u> 0            Indicates that the ISModem timed out waiting for a CJ signal 1            Indicates a CJ signal has been received by the remote modem
+A8M: <value>	V.8 menu report <u>&lt;value&gt;</u> <u>Description</u> 0            Indicates that the ISModem timed out waiting for a CM or JM signal <CM/JM hex string> This string is issued by either modem to indicate the contents of a valid received CM or JM signal.
+FCLASS = n	Fax mode select <u>n</u> <u>Mode</u> <b>0</b> <b>Data mode</b> 1        Fax class 1 / 1.0 mode 1.0     Fax class 1 / 1.0 mode 8        Voice mode
<b>*Note:</b> This command should only be issued when the Si2435/17 is off-hook.	

Table 10. Basic AT Command Set (Command Defaults in Bold) (Continued)

Command	Action
+FMI?	Report manufacturer ID. "Silicon Laboratories"
+FMM?	Report ISModem chipset model. <system-side> / <line-side> For example – "Si2435 / Si3018"
+FMR?	Report ISModem chipset revision. <system-side rev> / <line-side rev> For example – "A / F"
+FRH = n*	Receive Data with HDLC framing and carrier n. Only mandatory carrier, n = 3, supported.
+FRM = n*	Receive Data with carrier n. (See Table 11)
+FRS = n*	Report back to the DTE with an OK result code after n 10 ms intervals of silence have been detected on the line.
+FTH = n*	Transmit Data with HDLC framing and carrier n. Only mandatory carrier, n = 3, supported.
+FTM = n*	Transmit Data with carrier n. (See Table 11)
+FTS = n*	Stop transition and wait for n 10 ms intervals before responding with the OK result code.
+F34 options +F34 = A +F34 = A,B	Initial V.34 rate control This command is used to transmit or receive V.34 half-duplex data. V.34 full-duplex is not supported. The control channel remains fixed at 1200 bps. Upon a successful negotiation, a "+F34: <rate>" response code will be echoed. A Max rate for the primary channel in half-duplex operation. Values range from 1 (2400 bps) to 14 (33.6 kbps) in 2400 bps increments. The default value <b>0</b> selects a max rate of 33.6 kbps. B Min rate for the primary channel in half-duplex operation. Values range from 1 (2400 bps) to 14 (33.6 kbps) in 2400 bps increments. The default value <b>0</b> selects a min rate of 2400 bps.
<b>*Note:</b> This command should only be issued when the Si2435/17 is off-hook.	

Table 10. Basic AT Command Set (Command Defaults in Bold) (Continued)

Command	Action
+GCI = n	Country settings - Automatically configure all registers for a particular country. <u>n</u> <u>Country</u> 0      Japan 9      Australia A      Austria F      Belgium 16      Brazil 1B      Bulgaria 20      Canada 26      China 27      Columbia 2E      Czech Republic 31      Denmark 35      Ecuador 3C      Finland 3D      France 42      Germany 46      Greece 50      Hong Kong 51      Hungary 53      India 57      Ireland 58      Israel 59      Italy 61      South Korea 69      Luxembourg 6C      Malaysia 73      Mexico 7B      Netherlands 7E      New Zealand 82      Norway 87      Paraguay 89      Philippines 8A      Poland 8B      Portugal 9C      Singapore 9F      South Africa A0      Spain A5      Sweden A6      Switzerland B8      Russia B4      United Kingdom <b>B5</b> <b>United States</b> FE      Taiwan <b>Note:</b> U-registers are configured to Silicon Laboratories' recommended values. The +GCI command resets the U-registers and the S7 and S6 S-registers to default values before setting country-specific values. Changes may be made by writing individual registers after sending the AT+GCI command.
+GCI?	List current country code setting (response is: + GCI:<setting>)
<b>*Note:</b> This command should only be issued when the Si2435/17 is off-hook.	

Table 10. Basic AT Command Set (Command Defaults in Bold) (Continued)

Command	Action
+GCI = ?	List all possible country code settings.
+GMI	Report manufacturer ID. "Silicon Laboratories"
+GMM	Report ISOmodem chipset number. <system-side> / <line-side> For example – "Si2435 / Si3018"
+GMR	Report ISOmodem chipset revision. <system-side rev> / <line-side rev> For example – "A / F"
+IFC Options +IFC = A +IFC = A,B	Specifies the flow control to be implemented. A Specifies the flow control method used by the host to control data from the modem 0 None 2 Hardware flow control (RTS) B Specifies the flow control method used by the modem to control data from the host 0 None 2 Hardware flow control (CTS).
+IPR = n	Select DTE rate <u>n</u> <u>Description</u> <b>0</b> <b>Automatically detect baud rate</b> 2400 DTE rate of 2400 bits/s 9600 DTE rate of 9600 bits/s 19200 DTE rate of 19.2 kbits/s 115200 DTE rate of 115.2 kbits/s Other DTE rates supported include: n = 300, 600, 1200, 4800, 7200, 12000, 14400, 38400, 57600, 230400, 245760, 307200
+ITF Options +ITF = A +ITF = A,B +ITF = A,B,C	Transmit flow control threshold. A Threshold above which the modem will generate a flow off signal <0 to 511> bytes B Threshold below which the modem will generate a flow on signal <0 to 511> bytes C Polling interval for <EM><BNUM> indicator 0 to 300 in 10 msec units.
+MR = n	Modulation reporting control. <u>n</u> <u>Mode</u> <b>0</b> <b>Disabled</b> 1 Enabled If enabled, the intermediate result code is transmitted at the point during connect negotiation. The format of this result code is as follows: +MCR: <carrier> e.g. +MCR: V34 +MRR: <rate> e.g. +MRR: 33600
<b>*Note:</b> This command should only be issued when the Si2435/17 is off-hook.	

**Table 10. Basic AT Command Set (Command Defaults in Bold) (Continued)**

Command	Action
+MS Options +MS = A +MS = A,B +MS = A,B,C +MS = A,B,C,D +MS = A,B,C,D,E +MS = A,B,C,D,E,F	<p>Modulation Selection.</p> <p>To be used in conjunction with &amp;Tn to set up loop back test modes at the appropriate modulation.</p> <p>A Preferred modem carrier</p> <p>V21 ITU-T V.21</p> <p>V22 ITU-T V.22</p> <p>V22B ITU-T V.22bis</p> <p>V32 ITU-T V.32</p> <p>V32B ITU-T V.32bis</p> <p>V34 ITU-T V.34</p> <p>B Automatic modulation negotiation</p> <p>0 Disabled</p> <p><b>1 Enabled</b></p> <p>C,D Min TX rate/Max TX rate are optional numeric values that specify the lowest value at which the DCE may establish a connection. If unspecified (set to 0), they are determined by the carrier and automode settings.</p> <p>E,F Min RX rate/Max RX rate are optional numeric values which specify the highest value at which the DCE may establish a connection. If unspecified (set to 0), they are determined by the carrier and automode settings.</p>
+VCDT = n	<p>Caller ID Type.</p> <p><u>n</u> <u>Mode</u></p> <p><b>0 After ring only</b></p> <p>1 Always on</p> <p>2 UK</p> <p>3 Japan</p> <p>4 DTMF after polarity reversal</p> <p>5 DTMF after polarity reversal (off-hook reception)</p> <p>6 Always on DTMF</p> <p>7 DTMF after ring</p>
+VCID = n	<p>Caller ID Enable.</p> <p><u>n</u> <u>Mode</u></p> <p><b>0 Off</b></p> <p>1 On—formatted</p> <p>2 On—raw data format</p>
+VDR = n	<p>Distinctive ring</p> <p><u>n</u> <u>Mode</u></p> <p><b>0 Disable distinctive ring</b></p> <p>1,0 Enable distinctive ring. The ISModem will report DROF and DRON result codes only. DROF and DRON are reported in 100 ms units.</p> <p>1,x Enable distinctive ring. The ISModem will report DROF and DRON result codes as well as well as a RING result code x/10 seconds after the falling edge of a ring pulse. DROF and DRON are reported in 100 ms units.</p>
+VIP	Load voice factory defaults
<p><b>*Note:</b> This command should only be issued when the Si2435/17 is off-hook.</p>	

Table 10. Basic AT Command Set (Command Defaults in Bold) (Continued)

Command	Action
+VLS = n	Analog source / destination select <u>n</u> <u>Description</u> <b>0</b> <b>ISModem on-hook. AOUT disabled. Tone detectors disabled.</b> 1    ISModem off-hook. AOUT disabled. Tone detectors disabled. 4    ISModem on-hook. AOUT connected to ISModem tone generators. Tone detectors disabled. 5    ISModem off-hook. AOUT connected to PSTN. Tone detectors enabled. 20   ISModem on-hook. AOUT disabled. Tone detectors enabled. 21   ISModem on-hook. AOUT connected to ISModem tone generators. Tone detectors enabled.
+VNH = <hook>	Automatic hangup control <u>&lt;hook&gt;</u> <u>Hook control description</u> <b>0</b> <b>The ISModem retains automatic hangups as is normal in the other modes (such as hanging up the phone when the ISModem does not detect a data carrier with a given time interval).</b> 1    The ISModem shall disable automatic hangups in the other non-voice modes. 2    The ISModem shall disable all hang-ups in other non-voice modes. The ISModem shall only perform a "logical" hangup (return the OK result code).
+VRA = n	Ringing tone goes away timer The ISModem only uses this command in call origination transactions. This command sets the amount of time in 0.1 second units the ISModem shall wait between Ringing Tone before it can assume that the remote modem has gone off-hook. Default time is 5 seconds.
+VRID = n	Repeat caller ID <u>n</u> <u>Description</u> 0    Display Caller ID information of the last incoming call in formatted form. 1    Display Caller ID information of the last incoming call in unformatted form.
+VRN = n	Ringing tone never appeared timer This command sets the amount of time in seconds the ISModem will wait looking for Ringing Tone. If the ISModem does not detect Ringing Tone in this time period, the ISModem shall assume that the remote station has gone off-hook, and return a OK result code. Default time is 0 seconds.
+VSD = <sds>, <sdi>	Silence detection <u>&lt;sds&gt;</u> Noise level sensitivity 127    Less aggressive [more sensitive, lower noise levels considered to be silence]. <b>128</b> <b>Nominal level of sensitivity.</b> 129    More aggressive [less sensitive, higher noise levels considered to be silence]. <u>&lt;sdi&gt;</u> sets the length of a time interval in 0.1 second units, which must contain no or little activity, before the ISModem will report (QUIET) (<DLE><q>). Default is five seconds.
<b>*Note:</b> This command should only be issued when the Si2435/17 is off-hook.	

**Table 10. Basic AT Command Set (Command Defaults in Bold) (Continued)**

<b>Command</b>	<b>Action</b>
+VTD = n	DTMF / Tone duration timer This command sets the default DTMF / tone generation duration in 10 ms units for the +VTS command. Default time is 1 second (n = 100).
+VTS = <string>	DTMF and tone generation This command can be used to produce DTMF tones, single-frequency tones, and double-frequency tones.
<b>*Note:</b> This command should only be issued when the Si2435/17 is off-hook.

## 5. S-Registers

The S command allows reading (Sn?) or writing (Sn = x) the S-registers. The S-registers store values for functions that typically are rarely changed, such as timers or counters, and the ASCII values of control characters, such as carriage return. Table 13 summarizes the S-register set.

**Table 13. S-Register Description**

Definition				
S-Register (Decimal)	Function	Default (Decimal)	Range	Units
0	Automatic answer—Number of rings the Si2435/17 must detect before answering a call. 0 disables auto answer.	0	0–255	Rings
1	Ring counter.	0	0–255	Rings
2	ESC code character.	43 (+)	0–255	ASCII
3	Carriage return character.	13 (CR)	0–255	ASCII
4	Linefeed character.	10 (LF)	0–255	ASCII
5	Backspace character.	08 (BS)	0–255	ASCII
6	Dial tone wait timer—Number of seconds the Si2435/17 waits before blind dialing. Only applicable if blind dialing is enabled (X0, X1, X3).	02	0–255	seconds
7	Carrier wait timer—Number of seconds the Si2435/17 waits for carrier before timing out. This register also sets the number of seconds the modem waits for ring-back when originating a call before hanging up. This register also sets the number of seconds the answer tone will continue while using the AT*Y2A command.	80	0–255	seconds
8	Dial pause timer for , and < dial command modifiers.	02	0–255	seconds
9	Carrier presence timer—Time after a loss of carrier that a carrier must be detected before reactivating DCD. S9 is referred to as “carrier loss debounce time.”	06	1–255	0.1 second
10	Carrier loss timer—Time the carrier must be lost before the Si2435/17 disconnects. Setting 255 disables disconnect entirely. If S10 is less than S9, even a momentary loss of carrier causes a disconnect.	14	1–255	0.1 second
12	Escape code guard timer—Minimum guard time required before and after “+++” for the Si2435/17 to recognize a valid escape sequence.	50	1–255	0.02 second
14	Wait for dial tone delay value (in relation to the W dial modifier). Starts when “W” is executed in the dial string.	12	0–255	seconds

Table 13. S-Register Description (Continued)

Definition				
S-Register (Decimal)	Function	Default (Decimal)	Range	Units
24	Sleep Inactivity Time—Sets the time that the modem operates in normal power mode with no activity on the serial port, parallel port, or telephone line before entering low-power sleep mode. This feature is disabled if the timer is set to 0.	0	0–255	seconds
30	Disconnect Activity Timer—Sets the length of time that the modem stays online before disconnecting with no activity on the serial port, parallel port, or telephone line (Ring, hookswitch flash, or caller ID). This feature is disabled if set to 0.	0	0–255	minutes
38	Hang Up Delay Time—Maximum delay between receipt of ATH0 command and hang up. If time out occurs before all data can be sent, the NO CARRIER (3) result code is sent (operates in V.42 mode only). “OK” response is sent if all data is transmitted before timeout. S38 = 255 disables timeout and modem disconnects only if data is successfully sent or carrier is lost.	20	0–255	seconds
40	Data Pattern—Data pattern generated during &T4 and &T5 transmit tests. <b>0 = All spaces (0s)</b> 1 = All marks (1s) 2 = Random data	0	0–2

3200	4800–31200															
3429	4800–33600															
50	Minimum on-hook time—Modem will remain on-hook for S50 seconds. Any attempt to go off-hook will be delayed until this timer expires.	3	0–255	seconds												

## 6. User-Access Registers (U-Registers)

The :U AT command is used to write these 16-bit U-registers, and the :R command is used to read them. U-registers are identified by a hexadecimal (hex) address.

**Table 14. U-Register Description**

Register	Name	Description	Default
U00	DT1A0	DT1 registers set the coefficients for stage 1 of the Dial Tone Detect filter. Default is for FCC countries.	0x0800
U01	DT1B1		0x0000
U02	DT1B2		0x0000
U03	DT1A2		0x0000
U04	DT1A1		0x0000
U05	DT2A0	Dial tone detect filters stage 2 biquad coefficients.	0x00A0
U06	DT2B1		0x6EF1
U07	DT2B2		0xC4F4
U08	DT2A2		0xC000
U09	DT2A1		0x0000
U0A	DT3A0	Dial tone detect filters stage 3 biquad coefficients.	0x00A0
U0B	DT3B1		0x78B0
U0C	DT3B2		0xC305
U0D	DT3A2		0x4000
U0E	DT3A1		0xB50A
U0F	DT4A0	Dial tone detect filters stage 4 biquad coefficients.	0x0400

U11	DT4B2		0xC830
U12	DT4A2		0x4000
U13	DT4A1		0x80E2
U14	DTK	Dial tone detect filter output scaler.	0x0009
U15	DTON	Dial tone detect ON threshold.	0x00A0
U16	DTOF	Dial tone detect OFF threshold.	0x0070

**Table 14. U-Register Description (Continued)**

Register	Name	Description	Default
U17	BT1A0	BT1 registers set the coefficients for stage 1 of the Busy Tone Detect filter. Default is for FCC countries.	0x0800
U18	BT1B1		0x0000
U19	BT1B2		0x0000
U1A	BT1A2		0x0000
U1B	BT1A1		0x0000
U1C	BT2A0	Busy tone detect filter stage 2 biquad coefficients.	0x00A0
U1D	BT2B1		0x6EF1
U1E	BT2B2		0xC4F4
U1F	BT2A2		0xC000
U20	BT2A1		0x0000
U21	BT3A0	Busy tone detect filter stage 3 biquad coefficients.	0x00A0
U22	BT3B1		0x78B0
U23	BT3B2		0xC305
U24	BT3A2		0x4000
U25	BT3A1		0xB50A
U26	BT4A0	Busy tone detect filter stage 4 biquad coefficients.	0x0400
U27	BT4B1		0x70D2
U28	BT4B2		0xC830
U29	BT4A2		0x4000
U2A	BT4A1		0x80E2
U2B	BTK	Busy tone detect filter output scaler.	0x0009
U2C	BTON	Busy tone detect ON threshold.	0x00A0
U2D	BTOF	Busy tone detect OFF threshold.	0x0070
U2E	BMTT	Busy cadence minimum total time in seconds multiplied by 7200.	0x0870
U2F	BDLT	Busy cadence delta in seconds multiplied by 7200.	0x25F8
U30	BMOT	Busy cadence minimum on time in seconds multiplied by 7200.	0x0438
U31	RMTT	Ringback cadence minimum total time in seconds multiplied by 7200.	0x4650
U32	RDLT	Ringback cadence delta in seconds multiplied by 7200.	0xEF10
U33	RMOT	Ringback cadence minimum on time in seconds multiplied by 7200.	0x1200

Table 14. U-Register Description (Continued)

Register	Name	Description	Default
U34	DTWD	Window to look for dialtone in seconds multiplied by 1000.	0x1B58
U35	DMOT	Minimum dialtone on time in seconds multiplied by 7200.	0x2D00
U37	PD0	Number of pulses to dial 0.	0x000A
U38	PD1	Number of pulses to dial 1.	0x0001
U39	PD2	Number of pulses to dial 2.	0x0002
U3A	PD3	Number of pulses to dial 3.	0x0003
U3B	PD4	Number of pulses to dial 4.	0x0004
U3C	PD5	Number of pulses to dial 5.	0x0005
U3D	PD6	Number of pulses to dial 6.	0x0006
U3E	PD7	Number of pulses to dial 7.	0x0007
U3F	PD8	Number of pulses to dial 8.	0x0008
U40	PD9	Number of pulses to dial 9.	0x0009
U42	PDBT	Pulse dial break time (ms units).	0x003D
U43	PDMT	Pulse dial make time (ms units).	0x0027
U45	PDIT	Pulse dial interdigit time (ms units).	0x0320
U46	DTPL	DTMF power level—16-bit format is 0x0(H)(L)0 where H is the (–)dBm level of the high-frequency DTMF tone and L is the (–)dBm level of the low-frequency DTMF tone. Note that twist may be specified here.	0x09B0
U47	DTNT	DTMF on time (ms units).	0x0064
U48	DTFT	DTMF off time (ms units).	0x0064
U49	RGFH	Ring frequency high—Maximum frequency ring to be considered a valid ring. RGFH = 2400/(maximum ring frequency).	0x0022
U4A	RGFD	Ring delta $RGFD = 2400 \text{ Hz} \times \left( \frac{1}{\text{min ring freq (Hz)}} \right) - \left( \frac{1}{\text{max ring freq (Hz)}} \right)$	0x007A
U4B	RGMN	Ring cadence minimum ON time in seconds multiplied by 2400.	0x0258
U4C	RGNX	Ring cadence maximum total time in seconds multiplied by 2400.	0x6720
U4D	MOD1	This is a bit-mapped register.	0x0000
U4E	PRDD	Pre-dial delay-time after ATD command that modem waits to dial (ms units). The Si2435/17 stays on-hook during this time.	0x0000

**Table 14. U-Register Description (Continued)**

Register	Name	Description	Default
U4F	FHT	Flash Hook Time. Time corresponding with “!” or “&” dial modifier that the Si2435/17 goes on-hook during a flash hook (ms units).	0x01F4
U50	LCDN	Loop current debounce on time (ms units).	0x015E
U51	LCDF	Loop current debounce off time (ms units).	0x00C8
U52	XMTL	Transmit level (1 dB units)—Sets the modem data pump transmitter level. Default level of 0 corresponds to –9.85 dBm. Transmit level = $-(9.85 + XMTL)$ dBm. Range = –9.85 to –48.	0x0000
U62	DAAC1	This is a bit-mapped register.	0x0804
U63	DAAC3	This is a bit-mapped register.	
U65	DAAC4	This is a bit-mapped register.	0x00E0

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name	0	0	0	0	1	0	0	OHS2	0	0	0	0	0	FOH	DL	0
Type	R/W										R/W		R/W			

Reset settings = 0x0804

Bit	Name	Function												
15:12	Reserved	Must be set to 0.												
11	Reserved	Must be set to 1.												
10:9	Reserved	Must be set to 0.												
8	OHS2	<b>On-Hook Speed 2.</b> This bit works in combination with the OHS bit (U67, bit 6) to set the on-hook speed. The on-hook speeds are measured from the time the OH bit is cleared until loop current equals zero. <table border="1"> <thead> <tr> <th>OHS</th> <th>OHS2</th> <th>Mean On-Hook Speed</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> <td>Less than 0.5 ms</td> </tr> <tr> <td>0</td> <td>1</td> <td>3 ms <math>\pm</math>10% (meets ETSI standard)</td> </tr> <tr> <td>1</td> <td>X</td> <td>26 ms <math>\pm</math>10% (meets Australia spark quenching spec)</td> </tr> </tbody> </table>	OHS	OHS2	Mean On-Hook Speed	0	0	Less than 0.5 ms	0	1	3 ms $\pm$ 10% (meets ETSI standard)	1	X	26 ms $\pm$ 10% (meets Australia spark quenching spec)
OHS	OHS2	Mean On-Hook Speed												
0	0	Less than 0.5 ms												
0	1	3 ms $\pm$ 10% (meets ETSI standard)												
1	X	26 ms $\pm$ 10% (meets Australia spark quenching spec)												
7:3	Reserved	Must be set to 0.												
2	FOH	<b>Fast Off-Hook.</b> 0 = Automatic Calibration Time set to 426 ms. 1 = <b>Automatic Calibration Time set to 106 ms.</b>												
1	DL	<b>Isolation Digital Loopback (see the AT&amp;T commands).</b> 0 = Loopback occurs beyond the DAA interface, out to and including the analog hybrid circuit. 1 = Enables digital loopback mode across isolation barrier only.												
0	Reserved	Must be set to 0.												

**U63 DAAC3**

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name	LCS[7:0]							ACT[3:0]								
Type	R/W															

Reset settings = 0x0003

Bit	Name	Function
15:8	LCS[7:0]	Off-Hook Loop Current (1.1 mA/bit).
7:4	ACT[3:0]	<b>AC Termination Select.</b> <b>ACT[3:0] AC Termination</b> <b>0000 Real 600 <math>\Omega</math></b> 0011 220 $\Omega$ + (820 $\Omega$    120 nF) and 220 $\Omega$ + (820 $\Omega$    115 nF) 0100 370 $\Omega$ + (620 $\Omega$    310 nF) 1111 Global complex impedance
3:0	Reserved	Read returns 0x3.

**U65 DAAC4**

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name		PWMG	PDN									PDL				
Type		R/W	R/W									R/W				

Reset settings = 0x00E0

Bit	Name	Function
15	Reserved	Read returns zero.
14	PWMG	<b>PWM Gain.</b> <b>0 = No gain.</b> 1 = 6 dB gain applied to AOUT.
13	PDN	<b>Powerdown.</b> Completely powerdown the Si2435/17 and Si3018. Once set to 1, the Si2435/17 must be reset to power on. <b>0 = Normal.</b> 1 = Powerdown.
12:8	Reserved	Read returns zero.
7:5	Reserved	Must not change in a read-modify-write.
4	PDL*	<b>Powerdown Line-Side Chip.</b> <b>0 = Normal operation.</b> 1 = Places the Si3018 in powerdown mode.
3:0	Reserved	Must not change in a read-modify-write.

\*Note: Typically used only for board-level debug.

# Si2435/Si2417

Bit	Name	Function
1	RZ	<b>Ringer Impedance.</b> <b>0 = Maximum (high) ringer impedance.</b> 1 = Synthesize ringer impedance. C15, R14, Z2, and Z3 must not be installed when setting this bit.
0	RT	<b>Ringer Threshold Select.</b> Used to satisfy country requirements on ring detection. Signals below the lower level does not generate a ring detection; signals above the upper level are guaranteed to generate a ring detection. <b>0 = 11 to 22 V<sub>rms</sub>.</b> <b>1 = 17 to 33 V<sub>rms</sub>.</b>

## U68 ITC2

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name														BTE	ROV	BTD
Type														R/W	R/W	R/W

Reset settings = 0x0000

Bit	Name	Function
15:3	Reserved	Do not modify.
2	BTE	<b>Billing Tone Protect Enable.</b> <b>0 = Disabled.</b> 1 = Enabled. When set, the DAA responds automatically to a collapse of the line-derived power supply during a billing tone event. When off-hook, if BTE = 1 and BTD goes high, the dc termination is released (800 Ω presented to line). If BTE and RIM (U70, bit 9) are set, an RI (U70, bit 1) interrupt also occurs when BTD goes high.
1	ROV	<b>Receive Overload.</b> The bit is set when the receive input (i.e., receive pin goes below ground) has an excessive input level. This bit is cleared by writing a 0 to this location. <b>0 = Normal receive input level.</b> 1 = Excessive receive input level.
0	BTD	<b>Billing Tone Detected.</b> This bit is set if a billing tone is detected. This bit is cleared by writing a 0 to this location. 0 = No billing tone. 1 = Billing tone detected.

**U6A ITC4**

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name														OVL		
Type	R															

Reset settings = N/A

Bit	Name	Function
15:3	Reserved	Read returns zero.
2	OVL	<b>Overload Detected.</b> This bit has the same function as ROV, but clears itself after the overload has been removed. This bit is not affected by the BTE bit.
1:0	Reserved	Do not modify.

**U6C LVS**

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name	LVS[7:0]															
Type	R															

Reset settings = 0x0000

Bit	Name	Function
15:8	LVS[7:0]	<b>Line Voltage Status.</b> Eight bit signed, twos complement number representing the tip-ring voltage. Each bit represents 1 V. Polarity of the voltage is represented by the MSB (sign bit). 0000_0000 = Measured voltage is < 3 V.
7:0	Reserved	Read returns zero.

# Si2435/Si2417

## U6E CK1

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name				R1[4:0]												
Type	R/W															

Reset settings = 0x1F20

Bit	Name	Function
15:13	Reserved	Do not modify.
12:8	R1[4:0]	<b>R1 CLKOUT Divider.</b>
7:0	Reserved	Read returns zero.

## U6F PTMR

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name												PTMR[7:0]				
Type	R/W															

Reset settings = 0x00FF

Bit	Name	Function
15:8	Reserved	Do not modify
7:0	PTMR[7:0]	<b>Parallel Port Receive FIFO Interrupt Timer.</b>

## U70 IO0

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name	HES		TES	CIDM	OCDM	PPDM	RIM	DCDM	0			CID	OCD	PPD	RI	DCD
Type	R/W		R/W	R/W	R/W	R/W	R/W	R/W				R/W	R/W	R/W	R/W	R/W

Reset settings = 0x2700

Bit	Name	Function
15	HES	<b>Hardware Escape Pin.</b> 0 = Disable. 1 = Enable.
14	Reserved	Read returns zero.
13	TES	<b>Enable “+++” Escape.</b> 0 = Disable. 1 = Enable.
12	CIDM	<b>Caller ID Mask.</b> 0 = Change in CID will not affect INT. 1 = A low to high transition in CID activates $\overline{\text{INT}}$ .
11	OCDM	<b>Overcurrent Detect Mask.</b> 0 = Change in OCD does not affect INT. (“X” result code is not generated in command mode.) 1 = A low to high transition in OCD will activate INT. (“X” result code is generated in command mode.)
10	PPDM	<b>Parallel Phone Detect Mask.</b> 0 = Change in PPD does not affect $\overline{\text{INT}}$ . 1 = A low to high transition in PPD will activate INT.
9	RIM	<b>Ring Indicator.</b> 0 = Change in RI does not affect $\overline{\text{INT}}$ . 1 = A low to high transition in RI activates INT.
8	DCDM	<b>Data Carrier Detect Mask.</b> 0 = Change in DCD does not affect $\overline{\text{INT}}$ . 1 = A high to low transition in DCD (U70, bit 0), which indicates loss of carrier, activates INT.
7	Reserved	Must be set to zero.
6:5	Reserved	Read returns zero.
4	CID	<b>Caller ID (sticky).</b> Caller ID preamble has been detected; data will soon follow. Clears on :I read.
3	OCD	<b>Overcurrent Detect (sticky).</b> Overcurrent condition has occurred. Clears on :I read.
2	PPD	<b>Parallel Phone Detect (sticky).</b> Parallel phone detected since last off-hook event. Clears on :I read.
1	RI	<b>Ring Indicator.</b> Active high bit when the Si2435/17 is on-hook, indicates ring event has occurred. Clears on :I read.
0	DCD	<b>Data Carrier Detect (status).</b> Active high bit indicates carrier detected (equivalent to inverse of $\overline{\text{DCD}}$ pin).

# Si2435/Si2417

## U71 IO1

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name												COMP				PRT
Type												R/W				R/W

Reset settings = 0x0000

Bit	Name	Function
15:5	Reserved	Read returns zero.
4	COMP	<b>0 = Disables compression (PCM mode).</b> 1 = Enables linear compression.
3:1	Reserved	Read returns zero.
0	PRT	<b>0 = Disables PCM mode.</b> 1 = Enables PCM mode.

## U76 GEN1

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name	OHSR[6:0]						FACL	DCL[2:0]			ACL[4:0]					
Type	R/W							R/W			R/W					

Reset settings = 0x3240

Bit	Name	Function
15:9	OHSR[6:0]	<b>Off-Hook Sample Rate (40 ms units).</b> Sets the sample rate for the off-hook intrusion algorithms (1 second default).
8	FACL	<b>Force ACL.</b> <b>0 = While off-hook, ACL is automatically updated with LCS.</b> 1 = While off-hook, ACL does not change from the value written to it while on-hook.
7:5	DCL[2:0]	<b>Differential Current Level (3 mA units).</b> Sets the differential level between ACL and LCS that will trigger an off-hook PPD interrupt (default = 2).
4:0	ACL[4:0]	<b>Absolute Current Level (3 mA units).</b> ACL represents the value of LCS current when the ISOmodem® is off-hook and all parallel phones are on-hook. If ACL = 0, it is ignored by the off-hook intrusion algorithm. The ISOmodem will also write ACL with the contents of LCS before an intrusion and before going on-hook (default = 0).

## U77 GEN2

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name	IST[3:0]				HOI		AOC	OHT[8:0]								
Type	R/W				R/W		R/W		R/W							

Reset settings = 0x401E

Bit	Name	Function
15:12	IST[3:0]	<b>Intrusion Settling Time (250 ms units).</b> Delay between when the ISModem goes off-hook and the off-hook intrusion algorithm begins. Default is 1 s.
11	HOI	<b>Hang-Up On Intrusion.</b> <b>0 = ISModem will not automatically hang up when an off-hook PPD interrupt occurs.</b> 1 = ISModem automatically hangs up on a PPD interrupt. If %Vn commands are set, HOI also causes the "LINE IN USE" result code upon PPD interrupt.
10	Reserved	Read returns zero.
9	AOC	<b>Auto Overcurrent.</b> <b>0 = Disable.</b> 1 = Enable. <b>Note:</b> AOC may falsely detect an overcurrent condition in the presence of line reversals or other transients. Therefore, this feature should not be used in applications or locations (such as Japan) where line reversals are common or may be expected.
8:0	OHT[8:0]	<b>Off-Hook Time (1 ms units).</b> Time before LCS is checked for overcurrent condition after going off-hook (30 ms default).

# Si2435/Si2417

## U78 GEN3

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name	IB[1:0]											IS[7:0]				
Type	R/W										R/W					

Reset settings = 0x0000

Bit	Name	Function
15:14	IB[1:0]	<p><b>Intrusion Blocking.</b>            Defines the method used to block the off-hook intrusion algorithm from operation after dialing has begun.</p> <p><b>0 = No intrusion blocking.</b>            1 = Intrusion disabled from start of dial to end of dial.            2 = Intrusion disabled from start of dial to IS register time-out.            3 = Intrusion disabled from start of dial to connect (“CONNECT XXX”, “NO DIALTONE”, or “NO CARRIER”).</p>
13:8	Reserved	Read returns zero.
7:0	IS[7:0]	<p><b>Intrusion Suspend (500 ms units).</b>            When IB = 2, this register sets the length of time from when dialing begins that the off-hook intrusion algorithm is blocked (suspended) (default = 00000000<sub>b</sub>).</p>

Bit	Name	Function
15:8	Reserved	Read returns to zero.
7	DOP	<b>Dial or Pulse.</b> <b>0 = Normal ATDTW operation</b> 1 = Use ATDTW for Pulse/Tone Dial Detection (see also ATDW command)
6	ADD	<b>Adaptive Dialing</b> 1 = Enable <b>0 = Disable</b> Attempt DTMF dial, then fall back to pulse dialing if unsuccessful. First digit is dialed as DTMF. If a dialtone is still present after two seconds, the Si2435/17 will redial the first digit and remaining digits as pulse. If a dialtone is not present after two seconds, the Si2435/17 will dial the remaining digits as DTMF.
5:0	Reserved	Read returns to zero.

## U7C GENC

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name												RIGPO				RIGPIOEN
Type	R											R/W				

Reset settings = 0x0000

Bit	Name	Function
15:5	Reserved	Reads returns to zero.
4	RIGPO	$\overline{RI}$ $\overline{RI}$ (Pin 17), follows this bit when RIGPIOEN = 1 <sub>b</sub> .
3:1	Reserved	Reads returns to zero.
0	RIGPIOEN	<b>0 = <math>\overline{RI}</math> indicates valid ring signal. (Normal ring-indicator mode)</b> 1 = $\overline{RI}$ (Pin 17) can be used as a general purpose output and follows U7C[4] (RIGPO).

## U7D GEND

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name		NLM													ATZD	FDP
Type	R/W														R/W	R/W

Reset settings = 0x0000

Bit	Name	Function
15	Reserved	Reads returns to zero.
14	NLM	<b>0 = Enables “No Loop Current” detect.</b> 1 = Disables “No Loop Current” detect.
13:2	Reserved	Reads returns to zero.
1	ATZD	<b>ATZ Disable.</b> <b>0 = ATZ functions normally.</b> 1 = Disable ATZ command.
0	FDP	<b>FSK Data Processing.</b> <b>0 = FSK data processing stops when carrier is lost.</b> 1 = FSK data processing continued for 2 bytes after carrier is lost.

## U87 SAM

Bit	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Name						MINT	SERM	FSMS	XMTT[7:0]							
Type	R/W						R/W	R/W	R/W							

Reset settings = 0x0000

Bit	Name	Function
15:11	Reserved	Reads returns to zero.
10	MINT	<p><b>Minimal Transparency</b></p> <p><b>0 = Generates two-byte &lt;EM&gt; transparency sequences.</b> This option will use codes &lt;EM&gt;&lt;T5&gt; through &lt;EM&gt;&lt;T20&gt;, if possible, for received data containing two back-to-back bytes requiring transparency.</p> <p><b>1 = Generates one-byte &lt;EM&gt; transparency sequences.</b> This option will only use codes &lt;EM&gt;&lt;T1&gt; through &lt;EM&gt;&lt;T4&gt; for received data.</p>
9	SERM	<p><b>Special Error Reporting Mode</b></p> <p><b>0 = Ignore unrecognized in-band commands.</b></p> <p><b>1 = Generate &lt;EM&gt;&lt;0x45&gt; ("E" for error) in response to any unrecognized in-band commands.</b></p>
8	FSMS	<p><b>Framed Sub-Mode Startup</b></p> <p><b>0 = Upon successful connection, enter Transport Sub-Mode.</b> An &lt;EM&gt;&lt;FLAG&gt; is required to enter Framed Sub-Mode.</p> <p><b>1 = Upon successful connection, immediately enter Framed Sub-Mode.</b> The first received &lt;EM&gt;&lt;err&gt; from a successful hunt is transformed into an &lt;EM&gt;&lt;flag&gt;.</p>
7:0	XMTT	<p><b>Transmitter Threshold</b></p> <p>This value represents the number of bytes before a transmission is started.</p> <p>The following values are special:</p> <p>0     The same as ten. Upon receipt of ten bytes, data is transferred. The DTE must supply a closing flag within the required time or an underrun will occur.</p> <p>255   The same as infinity, e.g. never start a packet until the closing flag is received.</p>

## 7. Parallel Interface Registers

---

### Parallel Interface 0 (0x00)

---

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Name	TX/RX[7:0]							
Type	R/W							

Reset settings = 0x00

Bit	Name	Function
7:0	TX/RX[7:0]	<b>Parallel Interface Transmit/Receive.</b> This register functions similarly to the serial port TX pin on writes to the parallel port, and similarly to the serial port RX pin on reads from the parallel port.

Confidential

**Parallel Interface 1 (0x01)**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Name	RXF	TXE	REM	INTM	INT	ESC	$\overline{\text{RTS}}$	$\overline{\text{CTS}}$
Type	R	R	R	R/W	R	R/W	R/W	R

Reset settings = 0110\_0011

Bit	Name	Function
7	RXF	<b>Receive FIFO Almost Full (status).</b> 0 = Receive FIFO (12 deep) contains three or more empty locations ( $\text{RXF} \leq 9$ ). The host can clear the RXF interrupt without emptying the RX FIFO by writing a 0 to the RXF bit. This will disable the RXF interrupt until the host has emptied the FIFO. 1 = Receive FIFO contains two or less empty locations ( $\text{RXF} \geq 10$ ).
6	TXE	<b>Transmit FIFO Almost Empty (status).</b> 0 = Transmit FIFO (14 deep) contains three or more characters ( $\text{TXF} \geq 3$ ). 1 = Transmit FIFO contains two or less characters ( $\text{TXF} \leq 2$ ). <b>Note:</b> TXE interrupt will not trigger if the CTS bit is inactive. Therefore, the host does not need to poll CTS while waiting for transmit FIFO to empty. TXE can be cleared by writing it to 0.
5	REM	<b>Receive FIFO Empty.</b> 0 = Receive FIFO has valid data. 1 = Receive FIFO empty. <b>Note:</b> If the interim timer (see PTMR - U6F, bits 7:0) set by PTMR expires, it will cause an interrupt. This interrupt will not set RXF, TXE, or INT. The interrupt handler on the host should then verify that $\text{REM} = 0$ and begin to empty the receive FIFO (Parallel Interface 0 register) until $\text{REM} = 1$ .
4	INTM	<b>Interrupt Mask.</b> 0 = In parallel mode, the $\overline{\text{INT}}$ pin is triggered by a rising edge on RXF or TXE only (default). 1 = In parallel mode, the $\overline{\text{INT}}$ pin is triggered by a rising edge on RXF, TXE, or INT.
3	INT	<b>Interrupt.</b> 0 = No interrupt has occurred. 1 = Indicates that an interrupt (CID, OCD, PPD, RI, or DCD from U70) has occurred. This bit is cleared via the AT:I command.
2	ESC	<b>Escape.</b> Operation of this bit in parallel mode is functionally equivalent to the ESC pin in serial mode.
1	$\overline{\text{RTS}}$	<b>Request-to-Send.</b> Operation of this bit in parallel mode is functionally equivalent to the $\overline{\text{RTS}}$ pin in serial mode. Use of the $\overline{\text{CTS}}$ and $\overline{\text{RTS}}$ bits (as opposed to the TXE and RXF bits) allows the flow control between the host and the ISModem® to operate 1 byte at a time, rather than in blocks.
0	$\overline{\text{CTS}}$	<b>Clear-to-Send.</b> Operation of this bit in parallel mode is functionally equivalent to the $\overline{\text{CTS}}$ pin in serial mode. Use of the $\overline{\text{CTS}}$ and $\overline{\text{RTS}}$ bits (as opposed to the TXE and RXF bits) allows the flow control between the host and the ISModem to operate 1 byte at a time, rather than in blocks.

# Si2435/Si2417

## 8. Pin Descriptions: Si2435/17

Pin #	Pin Name	Description
1	CLKIN/XTALI	<b>Clock Input/Crystal Oscillator Pin.</b> This pin provides support for parallel-resonant, AT cut crystals. XTALI also acts as an input in the event that an external clock source is used in place of a crystal. A 4.9152 MHz crystal or 4.9152/27 MHz clock is required.
2	XTALO	<b>Crystal Oscillator Pin.</b> This pin provides support for parallel-resonant AT-cut crystals. XTALO serves as the output of the crystal amplifier.
3	CLKOUT/A0	<b>Clock Output/Address Bit 0.</b> Clock output in serial mode. Address Enable in parallel mode.
4	FSYNC/D6	<b>Frame Sync/Data Bit.</b> Frame Sync output to codec in serial mode. Bidirectional parallel bus data bit 6 in parallel mode.
5, 21	VD3.3	<b>Digital Supply Voltage.</b> Provides the 3.3 V digital supply voltage to the Si2435/17.
6, 20	GND	<b>Ground.</b> Connects to the system digital ground.
7, 19	VDA, VDB	<b>Digital Rail.</b> Pin provides additional power supply voltage to the Si2435/17.
8	RTS/D7	<b>Request-to-Send/Data Bit.</b> Request-to-send (for flow control) in serial mode. Bidirectional parallel bus data bit 7 in parallel mode.
9	RXD/RD	<b>Receive Data/Read Enable.</b> Data output to DTE RXD pin in serial mode. Active low read enable pin in parallel mode.

Pin #	Pin Name	Description
10	TXD/ $\overline{WR}$	<b>Transmit Data/Write Enable.</b> Data input from DTE TXD pin in serial mode. Active low write enable pin in parallel mode.
11	$\overline{CTS/CS}$	<b>Clear-to-Send/Chip Select.</b> Active low clear-to-send (for flow control) in serial mode. Active low chip select in parallel mode.
12	$\overline{RESET}$	<b>Reset Input.</b> An active low input that is used to reset all control registers to a defined initialized state.
13	C2A	<b>Isolation Capacitor 2A.</b> Connects to one side of the isolation capacitor, C2.
14	C1A	<b>Isolation Capacitor 1A.</b> Connects to one side of the isolation capacitor, C1.
15	AOUT/ $\overline{INT}$	<b>Analog Output/Interrupt Output.</b> Analog output in serial mode. Active low interrupt output in parallel mode.
16	$\overline{INT}/D0$	<b>Interrupt Output/Data Bit.</b> Active low interrupt output in serial mode. Bidirectional parallel bus data bit 0 in parallel mode.
17	$\overline{RI}/D1$	<b>Ring Indicator/Data Bit.</b> The $\overline{RI}$ on (active low) indicates the presence of an ON segment of a ring signal on the telephone line. Bidirectional parallel bus data bit 1 in parallel mode.
18	SDI/D2	<b>Serial Data In/Data Bit.</b> Serial Data In (to codec) output in serial mode. Bidirectional parallel bus data bit 2 in parallel mode.
22	ESC/D3	<b>Escape/Data Bit.</b> Hardware escape in serial mode. Bidirectional parallel bus data bit 3 in parallel mode.
23	$\overline{DCD}/D4$	<b>Carrier Detect/Data Bit.</b> Active low carrier detect in serial mode. Bidirectional parallel bus data bit 4 in parallel mode.
24	SDO/D5	<b>Serial Data Out/Data Bit 5.</b> Serial Data Out (from codec) input in serial mode. Bidirectional parallel bus data bit 5 in parallel mode.

## 9. Pin Descriptions: Si3018

**Table 16. Si3018 Pin Descriptions**

Pin #	Pin Name	Description
1	QE	<b>Transistor Emitter.</b> Connects to the emitter of Q3.
2	DCT	<b>DC Termination.</b> Provides dc termination to the telephone network.
3	RX	<b>Receive Input.</b> Serves as the receive side input from the telephone network.
4	IB	<b>Internal Bias.</b> Provides a bias voltage to the device.
5	C1B	<b>Isolation Capacitor 1B.</b> Connects to one side of isolation capacitor C1 and communicates with the Si2435/17.
6	C2B	<b>Isolation Capacitor 2B.</b> Connects to one side of isolation capacitor C2 and communicates with the Si2435/17.
7	VREG	<b>Voltage Regulator.</b> Connects to an external capacitor to provide bypassing for an internal power supply.
8	RNG1	<b>Ring 1.</b> Connects through a resistor to the RING lead of the telephone line. Provides the ring and caller ID signals to the Si2435/17.
9	RNG2	<b>Ring 2.</b> Connects through a resistor to the TIP lead of the telephone line. Provides the ring and caller ID signals to the Si2435/17.
10	VREG2	<b>Voltage Regulator 2.</b> Connects to an external capacitor to provide bypassing for an internal power supply.
11	SC	<b>SC Connection.</b> Enables external transistor network. Should be tied through a 0 Ω resistor to I <sub>GND</sub> .
12	QE2	<b>Transistor Emitter 2.</b> Connects to the emitter of Q4.
13	QB	<b>Transistor Base.</b> Connects to the base of transistor Q4.
14	DCT3	<b>DC Termination 3.</b> Provides the dc termination to the telephone network.
15	IGND	<b>Isolated Ground.</b> Connects to ground on the line-side interface.
16	DCT2	<b>DC Termination 2.</b> Provides dc termination to the telephone network.

10. Ordering Guide<sup>1,2</sup>

System Side			
Part Number	Package	Lead-Free	Temp Range
Si2435-X-FT	TSSOP-24	Yes	0 to 70 °C
Si2417-X-FT	TSSOP-24	Yes	0 to 70 °C
Line Side			
Part Number	Package	Lead-Free	Temp Range
Si3018-X-FS	SOIC-16	Yes	0 to 70 °C
<b>Notes:</b>			
1. "X" denotes product revision.			
2. Add an "R" at the end of the device to denote tape and reel option; 2500 quantity per reel.
