

BOOST/BUCK DC-DC CONVERTER FOR DIMMABLE MR16 LED LAMPS

Description

The AL8812 is a monolithic control circuit containing the primary functions required for DC-to-DC converters with MOSFET in one package. These devices consist of an internal temperature compensated reference, comparator, controlled duty cycle oscillator with an active current limit circuit, driver and high current output switch. Additionally a 60V, 3.6A MOSFET is integrated for reduced BOM cost and size. This series is specifically designed for buck and boost applications with a minimum number of external components.

Pin Assignments

Features

- Operation from 3.0V to 20V Input
- Integrated 60V, 3.6A MOSFET
- Low Standby Current
- Current Limiting
- Output Voltage Adjustable
- Frequency Operation to 100 kHz
- Precision 2% Reference
- **Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)**
- **Halogen and Antimony Free. "Green" Device (Note 3)**

Applications

- Low Voltage LED Lighting such as MR-16
- General Purpose DC-DC Converter

Notes:

1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS) & 2011/65/EU (RoHS 2) compliant.
2. See http://www.diodes.com/quality/lead_free.html for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

Pin Descriptions

Pin Name	Pin Number (U-DFN6040-12)	Function
NC	1	No Connection
GATE	2	Gate connection of internal MOSFET.
INPUT	3	Feedback pin for inverting input of internal comparator
VCC	4	Supply voltage pin
SENSE	5	No Connection.
DRIVE	6	Current drive collector: Normally connected to V _{CC} directly or via a resistor.
SW/C	7	Internal switch transistor collector
SW/E	8	Internal switch transistor emitter
GND	9	Ground Connection
TIMING	10	Timing Capacitor to control the switching frequency.
SOURCE	11	Source connecton of internal MOSFET
DRAIN	12	Drain connection of internal MOSFET
Exposed PAD1		Exposed Pad of MOSFET Drain
Exposed PAD2		Exposed Pad of AL8812 and connect to PCB ground

C_O	9	$I_{OUT} t_{ON}$	$I_{pk} (switch) (t_{OFF} + t_{ON})$	
		$V_{ripple (pp)}$	$8V_{ripple (pp)}$	

V_{sat} = Saturation voltage of the output switch.

V_F = Forward voltage drop of the output rectifier.

The following power supply characteristics must be chosen:

V_{IN} - Nominal input voltage.

V_{OUT} - Desired output voltage, $|V_{OUT}| = 1.25 (1 + R2/R1)$

I_{OUT} - Desired output current.

f_{min} - Minimum desired output switching frequency at the selected values of V_{in} and I_o .

$V_{ripple(pp)}$ - Desired peak-to-peak output ripple voltage. In practice, the calculated capacitor value will need to be increased due to its equivalent series resistance and board layout. The ripple voltage should be kept to a low value since it will directly affect the line and load regulation.

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
