- State-of-the-Art EPIC-IIB™ BiCMOS Design Significantly Reduces Power Dissipation
- ESD Protection Exceeds 2000 V Per MIL-STD-883C, Method 3015; Exceeds 200 V Using Machine Model (C = 200 pF, R = 0)
- Latch-Up Performance Exceeds 500 mA Per JEDEC Standard JESD-17
- Typical V_{OLP} (Output Ground Bounce)
 1 V at V_{CC} = 5 V, T_A = 25°C
- High-Drive Outputs (-32-mA I_{OH}, 64-mA I_{OL})
- Package Options Include Plastic Small-Outline (SOIC) and Shrink Small-Outline (SSOP) Packages, Ceramic Chip Carriers, and Plastic and Ceramic DIPs

description

The 'ABT640 bus transceiver is designed for asynchronous communication between data buses. These devices transmit data from the A bus to the B bus or from the B bus to the A bus depending upon the level at the direction-control (DIR) input. The output-enable (\overline{OE}) input can be used to disable the device so that the buses are effectively isolated.

To ensure the high-impedance state during power up or power down, \overline{OE} should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

The SN74ABT640 is available in TI's shrink small-outline package (DB), which provides the same I/O pin count and functionality of standard small-outline packages in less than half the printed-circuit-board area.

The SN54ABT640 is characterized for operation over the full military temperature range of -55° C to 125° C. The SN74ABT640 is characterized for operation from -40° C to 85° C.

[†] This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[‡]

Supply voltage range, V _{CC}	0.5 V to 7 V
Input voltage range, VI (except I/O ports) (see Note 1)	0.5 V to 7 V
Voltage range applied to any output in the high state or power-off state, VO	
Current into any output in the low state, IO: SN54ABT640	
SN74ABT640	128 mA
Input clamp current, I _{IK} (V _I < 0)	
Output clamp current, I _{OK} (V _O < 0)	
Maximum power dissipation at T _A = 55°C (in still air): DB package	
DW package	
N package	1.3 W
Storage temperature range	65°C to 150°C

\$ Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

recommended operating conditions (see Note 2)

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

All typical values are at V_{CC} = 5 V.
 On products compliant to MIL-STD-883, Class B, this parameter does not apply.

§ The parameters IOZH and IOZL include the input leakage current.

I Not more than one output should be tested at a time, and the duration of the test should not exceed one second.

This is the increase in supply current for each input that is at the specified TTL voltage level rather than V_{CC} or GND.

switching characteristics over recommended ranges of supply voltage and operating free-air temperature, C_L = 50 pF (unless otherwise noted) (see Figure 1)

PARAMETER MEASUREMENT INFORMATION

NOTES: A. CL includes probe and jig capacitance.

- B. All input pulses are supplied by generators having the following characteristics: $PRR \le 10 \text{ MHz}$, $Z_0 = 50 \Omega$, $t_T \le 2.5 \text{ ns}$, $t_f \le 2.5 \text{ ns}$. C. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control.
 - Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- D. The outputs are measured one at a time with one transition per measurement.
