## Fibre Channel Coaxial Cable Driver and Loop Resiliency Circuit

### Description

The MC10SX1189 is a differential receiver, differential transmitter specifically designed to drive coaxial cables. It incorporates the output cable drive capability of the MC10EL89 Coaxial Cable Driver with additional circuitry to multiplex the output cable drive source between the cable receiver or the local transmitter inputs. The multiplexer control circuitry is TTL compatible for ease of operation.

The MC10SX1189 is useful as a bypass element for Fibre Channel-Arbitrated Loop (FC-AL) or Serial Storage Architecture (SSA) applications, to create loop style interconnects with fault tolerant, active switches at each device node. This device is particularly useful for back panel applications where small size is desirable.

The EL89 style drive circuitry produces swings twice as large as a standard PECL output. When driving a coaxial cable, proper termination is required at both ends of the line to minimize reflections. The 1.6 V output swings allow for proper termination at both ends of the cable, while maintaining the required swing at the receiving end of the cable. Because of the larger output swings, the QT,  $\overline{QT}$  outputs are terminated into the thevenin equivalent of 50  $\Omega$  to  $V_{CC} - 3.0$  V instead of 50  $\Omega$  to  $V_{CC} - 2.0$  V.

### Features

- 425 ps Propagation Delay
- 1.6 V Output Swing on the Cable Driving Output
- Operation Range:  $V_{CC} = 4.5$  V to 5.5 V
- 75 k $\Omega$  Internal Input Pull Down Resistors
- >1000 V ESD Protection
- Transistor Count = 102
- Pb-Free Packages are Available\*

### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 4 of this data sheet.

## MC10SX1189

Figure 2. LOGIC DIAGRAM

Table 1. ABSOLUTE MAXIMUM RATINGS

| Symbol           | Parameter                                | Value       | Unit |
|------------------|------------------------------------------|-------------|------|
| V <sub>CC</sub>  | Power Supply Voltage (Referenced to GND) | 0 to +7.0   | Vdc  |
| V <sub>IN</sub>  | Input Voltage (Referenced to GND)        | 0 to +6.0   | Vdc  |
| I <sub>OUT</sub> | Output Current<br>Continuous<br>Surge    | 50<br>100   | mA   |
| T <sub>A</sub>   | Operating Temperature Range              | −40 to +85  | °C   |
| T <sub>STG</sub> | Storage Temperature Range                | −50 to +150 | °C   |

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

1. Values will track 1:1 with the  $V_{CC}$  supply.  $V_{EE}$  can vary +0.5 V to -0.5 V.
2. Outputs loaded with  $50\ \Omega$  to  $V_{CC} - 2.0\text{ V}$ .
3. Outputs loaded with  $50\ \Omega$  to  $V_{CC} - 3.0\text{ V}$ .
4. Outputs open circuited.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

- $V_{EE}$  can vary +0.5 V to -0.5 V.
- The differential propagation delay is defined as the delay from the crossing points of the differential input signals to the crossing point of the differential output signals.
- The single-ended propagation delay is defined as the delay from the 50% point of the input signal to the 50% point of the output signal.
- Duty cycle skew is the difference between  $t_{PLH}$  and  $t_{PHL}$  propagation delay through a device.
- Minimum input swing for which AC parameters are guaranteed.
- The CMR range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between  $V_{PP\text{ Min}}$  and 1.0 V.

## PACKAGE DIMENSIONS

### SOIC CASE 751B-05 ISSUE J

#### NOTES:

1. DIMENSIONING AND TOLERANCING PER ANSI Y14.5M, 1982.
2. CONTROLLING DIMENSION: MILLIMETER.
3. DIMENSIONS A AND B DO NOT INCLUDE MOLD PROTRUSION.
4. MAXIMUM MOLD PROTRUSION 0.15 (0.006) PER SIDE.
5. DIMENSION D DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION SHALL BE 0.127 (0.005) TOTAL IN EXCESS OF THE D DIMENSION AT MAXIMUM MATERIAL CONDITION.

| DIM | MILLIMETERS |       | INCHES    |       |

ON Semiconductor and  are registered trademarks of Semiconductor Components Industries, LLC (SCILLC). SCILLC reserves the right to make changes without further notice to any products herein. SCILLC makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does SCILLC assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. "Typical" parameters which may be provided in SCILLC data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. SCILLC does not convey any license under its patent rights nor the rights of others. SCILLC products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the SCILLC product could create a situation where personal injury or death may occur. Should Buyer purchase or use SCILLC products for any such unintended or unauthorized application, Buyer shall indemnify and hold SCILLC and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that SCILLC was negligent regarding the design or manufacture of the part. SCILLC is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
