

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All recreations are done with the approval of the OCM.

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceed the OCM data sheet.

Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-35835
 - Class Q Military
 - Class V Space Level
- Qualified Suppliers List of Distributors (QSLD)
 - Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OEM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

- Each Device Drives 32 Electrodes
- 60-V Output Voltage Swing Capability
- 15-mA Output Source and Sink Current Capability
- High-Speed Serially-Shifted Data Input
- Totem-Pole Outputs
- Latches on All Driver Outputs

description

The SN65553, SN65554, SN75553, and SN75554 are monolithic BIDFET† integrated circuits designed to drive the column electrodes of an electroluminescent display. The SN65554 and SN75554 output sequence is reversed from the SN65553 and SN75553 for ease in printed-circuit-board layout.

The devices consist of a 32-bit shift register, 32 latches, and 32 output AND gates. Serial data is entered into the shift register on the low-to-high transition of CLOCK. When high, LATCH ENABLE transfers the shift register contents to the outputs of the 32 latches. When OUTPUT ENABLE is high, all Q outputs are enabled. Serial data output from the shift register can be used to cascade shift registers. This output is not affected by LATCH ENABLE or OUTPUT ENABLE.

The SN65553 and SN65554 are characterized for operation from -40°C to 85°C. The SN75553 and SN75554 are characterized for operation from 0°C to 70°C.
