

## General Description

The MAX6754–MAX6764 low-power window detectors monitor undervoltage/overvoltage conditions on system power supplies. These devices assert when the monitored voltage is under the undervoltage and/or over the overvoltage thresholds.

The MAX6754–MAX6759/MAX6763/MAX6764 monitor a single voltage. The MAX6760/MAX6761/MAX6762 monitor dual-voltage systems. The MAX6754/MAX6755/MAX6756 provide a single undervoltage/overvoltage output and the MAX6757–MAX6764 provide independent undervoltage and overvoltage outputs. The outputs are available in push-pull or open-drain configurations.

The MAX6754–MAX6762 offer factory-fixed voltage thresholds for monitoring system voltages from 0.9V to 5V with a selectable  $\pm 5\%$ ,  $\pm 10\%$ , or  $\pm 15\%$  window voltage. The MAX6763/MAX6764 allow for externally adjustable thresholds. The MAX6754–MAX6762 are available in two delay-timing options (20 $\mu$ s, typ or 100ms, min). The MAX6760/MAX6761/MAX6762 also include a latched overvoltage output function and the MAX6754–MAX6762 include a manual reset input.

This family of products is available in small SOT23 and TDFN packages, and is specified over the extended temperature range of  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .

## Applications

- Telecommunications
- Networking
- Computers/Servers
- Data Storage
- Power Metering
- DC-DC Converter Modules
- Automotive

[Pin Configurations](#) appear towards end of data sheet.

[Ordering Information](#) appears at end of data sheet.

## Benefits and Features

- Single/Dual-Supply Voltage Monitors
- Factory-Trimmed Window Threshold Options for 5V, 3.3V, 3V, 2.5V, 1.8V, 1.5V, 1.2V, and 0.9V Supplies
- Externally Adjustable Window Monitoring Options for Supplies Down to 0.5V
- Selectable Window Threshold Options ( $\pm 5\%$ ,  $\pm 10\%$ ,  $\pm 15\%$ )
- Single (Combined UV/OV) or Dual (Separate UV and OV) Outputs
- 20 $\mu$ s (typ) or 100ms (min) Timeout Period Options (MAX6754–MAX6762)
- Manual Reset Input (MAX6754–MAX6762)
- Latched Overvoltage Output Function (MAX6760/MAX6761/MAX6762)
- Immune to Short Voltage Transients
- Low 10 $\mu$ A Supply Current
- Low-Voltage Operation (Outputs Valid for VCC Down to 1V)
- $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  Operating Temperature Range
- Small SOT23 and TDFN Packages
- AEC-Q100 Qualified (V Parts Only, Refer to [Ordering Information](#))

## Typical Application Circuit

## Absolute Maximum Ratings

(Voltages with respect to GND.)

$V_{CC}$ ,  $V_{CC2}$  ..... -0.3V to +6.5V  
 SET, OVLATCH,  $\overline{MR}$ , UVIN, OVIN ..... -0.3V to ( $V_{CC}$  + 0.3V)  
 $\overline{UV}$ , RESET,  $\overline{OV}$  (open drain) ..... -0.3V to +6.5V  
 RESET,  $\overline{OV}$ , UV,  $\overline{UV}$ , RESET (push-pull) ..... -0.3V to ( $V_{CC}$  + 0.3V)  
 Input/Output Current (all pins) ..... 20mA  
 Continuous Power Dissipation ( $T_A$  = +70°C)  
   5-Pin SOT23-5 (derate 7.1mW/°C above  $T_A$  = +70°C) ... 571mW  
   6-Pin SOT23-6 (derate 8.7mW/°C above  $T_A$  = +70°C) ... 696mW  
   8-Pin TDFN (derate 24.4mW/°C above  $T_A$  = +70°C) .... 1951mW

Operating Temperature Range ..... -40°C to +125°C  
 Junction Temperature ..... +150°C  
 Storage Temperature Range ..... -65°C to +150°C  
 Lead Temperature (soldering, 10s) ..... +300°C  
 Soldering Temperature (reflow)  
   Lead(Pb)-Free Package ..... +260°C  
   Containing Lead(Pb) ..... +240°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Electrical Characteristics

( $V_{CC}$  = 1.0V to 6.0V,  $V_{CC2}$  = 0 to 6.0V (MAX6760–MAX6762),  $T_A$  = -40°C to +125°C, unless otherwise noted. Typical values are at  $T_A$  = +25°C.) (Note 1)

| $\overline{RESET}$ , $\overline{UV}$ , $\overline{OV}$ Output Open-<br>Drain Leakage Current | $I_{LKG}$ | Output not asserted                                                     |                     |     | 1   | $\mu A$ |

**Note 1:** Devices are production tested at  $+25^{\circ}C$ . Overtemperature limits are guaranteed by design.

**Note 2:** Voltage monitoring requires that  $V_{CC}$  must be greater than or equal to  $1.4V$ , but outputs remain asserted in the correct state for  $V_{CC}$  down to  $1.0V$ .

**Note 3:** Guaranteed by design.

**Note 4:** For D0 window detector options and  $\overline{OV}$  outputs, startup delay time is the time required for the internal reference/circuitry to reach specified accuracy after the monitor is powered up from GND.

**Note 5:** The input bias voltage is based off of  $V_{CC}$ . The minimum value is given by the equation  $(0.1 \times V_{CC} + 0.51)V$  and the maximum value is given by  $(0.9 \times V_{CC} - 0.51)V$ .

## Typical Operating Characteristics

( $V_{CC} = 5V$ ,  $V_{CC2} = 3.3V$ ,  $T_A = +25^\circ C$ , unless otherwise noted.)

Pin Configurations

Pin Description

| PIN                             |                                 |                                 |                     | NAME            | FUNCTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## Detailed Description

The MAX6754–MAX6764 are low-power window voltage detectors capable of monitoring undervoltage and overvoltage conditions on system power supplies. Whenever a monitored voltage falls below its undervoltage threshold or exceeds its overvoltage threshold, these devices assert their outputs to notify the system (see [Functional Diagrams](#)).

The MAX6754/MAX6755/MAX6756 are single-voltage window detectors with internally fixed nominal voltage, externally adjustable set window, single reset undervoltage/overvoltage output, and a manual reset input.

The MAX6757/MAX6758/MAX6759 are single-voltage window detectors with internally set nominal voltage, externally adjustable set window, separate undervoltage/overvoltage outputs, and manual reset input.

The MAX6760/MAX6761/MAX6762 are dual-voltage window detectors with internally/externally set nominal voltages, externally adjustable set window, separate undervoltage/overvoltage outputs, manual reset input, and overvoltage latch functions.

The MAX6763/MAX6764 are single adjustable window detectors with separate undervoltage/overvoltage outputs.

The MAX6754–MAX6762 offer factory-fixed voltage thresholds for monitoring system voltages from 0.9V to 5V. The MAX6754–MAX6762 include a SET function to select the window voltage to  $\pm 5\%$ ,  $\pm 10\%$ , or  $\pm 15\%$ . The MAX6763/MAX6764 allow for externally adjustable upper

and lower voltage thresholds to be set externally (down to 0.5V). The MAX6754–MAX6762 are available with two timing options (20 $\mu$ s propagation delay or 100ms minimum reset timeout).

## Supply Voltages

$V_{CC}$  is the power-supply input and the monitored voltage of the MAX6754–MAX6762. These devices feature a factory-trimmed  $V_{CC}$  and  $V_{CC2}$  divider that sets the nominal input range (see [Table 1](#) and [Table 2](#)).  $V_{CC}$  for the MAX6763/MAX6764 is the power supply of the device and not the monitored voltage. For noisy systems, bypass  $V_{CC}$  and  $V_{CC2}$  each with a 0.1 $\mu$ F capacitor to GND. Connect  $V_{CC}$  of the MAX6756 to an RC filter to ensure proper operation during extreme transition events. A 100 $\Omega$  resistor in series with a 0.1 $\mu$ F bypass capacitor is sufficient for most applications. See [Figure 9](#) for more details.

## Setting the Adjustable Nominal Voltage Threshold

The MAX6760/MAX6761/MAX6762 (versions with suffixes LA, TA, RA, ZA, WA, and AA) offer adjustable nominal voltage threshold to monitor  $V_{CC2}$ . Use an external voltage-divider to set the voltage at  $V_{CC2}$  to 0.4255V. Configure SET to select a monitor window of  $\pm 5\%$ ,  $\pm 10\%$ , or  $\pm 15\%$  (see [Figure 5](#)). The MAX6760/MAX6761/MAX6762 suffix AA monitor only  $V_{CC2}$  and do not monitor  $V_{CC}$ .

Figure 5. Setting the Threshold Voltage of  $V_{CC2}$

Figure 6. Setting the Undervoltage/Overvoltage Window

Choose R2 to have a resistance of up to 500kΩ. Calculate R1 by:

$$R1 = ((V+ - 0.4255V) \times R2) / 0.4255V$$

The MAX6763/MAX6764 provide inputs to a window detector allowing the programming of the threshold voltage to within  $V_{CC}$  (see [Figure 6](#)).

Choose R1, R2, and R3 such that:

$$(V+ / (R1 + R2 + R3)) \geq 1\mu A$$

## SET

The MAX6754–MAX6762 allow the setting of the window voltage range of the voltage detector. Connect SET to GND to set a  $\pm 5\%$  window. Connect SET to  $V_{CC}$  for a  $\pm 10\%$  window. Bias SET to  $V_{CC} / 2$  for a  $\pm 15\%$  window.

## Manual Reset ( $\overline{MR}$ )

The MAX6754–MAX6762 include an active-low manual reset input. Drive  $\overline{MR}$  low to assert a reset output (MAX6754/MAX6755/MAX6756) or an undervoltage output (MAX6757/MAX6758/MAX6759). The output remains asserted for the specified propagation delay time (see [Figure 7a](#) and [Figure 7b](#)) after  $\overline{MR}$  goes high.  $\overline{MR}$  is internally pulled to  $V_{CC}$  with a 26kΩ resistor.

## Overvoltage Latch Control Input (OVLATCH)

The MAX6760/MAX6761/MAX6762 provide an overvoltage latch control input (OVLATCH). Drive OVLATCH high to latch the overvoltage output for any  $V_{CC}$  or  $V_{CC2}$  overvoltage condition. Drive OVLATCH low to clear the latch after overvoltage conditions have been removed. The latch is transparent when OVLATCH is connected to GND. OVLATCH is a high impedance input. Use external pullup or pulldown.

## Reset, Undervoltage, and Overvoltage Outputs ( $\overline{RESET}$ , $\overline{RESET}$ , $\overline{UV}$ , $UV$ , $OV$ )

$\overline{RESET}$ ,  $\overline{RESET}$ ,  $\overline{UV}$ ,  $UV$ , and  $OV$  outputs assert when the monitored supply is below the selected  $UV_{TH}$  threshold or above the selected  $OV_{TH}$  threshold. The reset output deasserts after the specified timeout period when the monitored supply rises above the  $UV_{TH}$  threshold or drops below the  $OV_{TH}$  threshold. The push-pull versions are referenced to  $V_{CC}$ .

The MAX6760/MAX6761/MAX6762 monitor both  $V_{CC}$  and  $V_{CC2}$ . An undervoltage/overvoltage condition on either voltage supply asserts the corresponding output.  $\overline{RESET}$  and  $\overline{UV}$  are guaranteed to be in the correct logic state when  $V_{CC}$  or  $V_{CC2} > 1V$ .

## Applications Information

### Microprocessor Monitoring

Figure 8 shows a microprocessor monitoring circuit. An overvoltage condition on either the core or I/O supply

turns the SCR on, blowing the fuse to disconnect the circuit from the power source. An optional capacitor (C1) on the gate of the SCR provides additional transient immunity against nuisance trips.

## Ordering Information

| PART             | TEMP RANGE      | PIN-PACKAGE |
|------------------|-----------------|-------------|
| MAX6754UK_D_-T   | -40°C to +125°C | 5 SOT23-5   |
| MAX6755UK_D_-T   | -40°C to +125°C | 5 SOT23-5   |
| MAX6756UK_D_-T   | -40°C to +125°C | 5 SOT23-5   |
| MAX6756UK_D_/V+T | -40°C to +125°C | 5 SOT23-5   |
| MAX6757UT_D_-T   | -40°C to +125°C | 6 SOT23-6   |
| MAX6758UT_D_-T   | -40°C to +125°C | 6 SOT23-6   |
| MAX6759UT_D_/V-T | -40°C to +125°C | 6 SOT23-6   |
| MAX6760TA__D_-T  | -40°C to +125°C | 8 TDFN-EP   |
| MAX6761TA__D_-T  | -40°C to +125°C | 8 TDFN-EP   |
| MAX6762TA__D_-T  | -40°C to +125°C | 8 TDFN-EP   |
| MAX6763UT-T      | -40°C to +125°C | 6 SOT23-6   |
| MAX6764UT-T      | -40°C to +125°C | 6 SOT23-6   |

Devices are available in both leaded and lead(Pb)-free packaging. Specify lead-free by replacing “-T” with “+T” when ordering.

/V denotes an automotive qualified part.

Insert the threshold level suffixes for  $V_{CC}$  and  $V_{CC2}$  (see [Table 1](#) and [Table 2](#)) after UK, UT, or TA. For the MAX6754–MAX6759, insert only the  $V_{CC}$  threshold suffix after the UK or UT. Insert the reset timeout delay (see [Table 3](#)) after D to complete the part number. For example, the MAX6760TALTD3-T provides a  $V_{CC}$  threshold of 5V, a  $V_{CC2}$  threshold of 3.3V, and a 100ms minimum reset timeout period. Sample stock is generally held on standard versions only (see the [Standard Versions Table](#)).

Standard versions have an order increment requirement of 2500 pieces. Nonstandard versions have an order increment requirement of 10,000 pieces. Contact factory for availability.

## Chip Information

PROCESS: BiCMOS

## Package Information

For the latest package outline information and land patterns (footprints), go to [www.maximintegrated.com/packages](http://www.maximintegrated.com/packages). Note that a “+”, “#”, or “-” in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

| PACKAGE TYPE | PACKAGE CODE | OUTLINE NO.             | LAND PATTERN NO.        |
|--------------|--------------|-------------------------|-------------------------|
| 5 SOT23      | U5+1         | <a href="#">21-0057</a> | <a href="#">90-0174</a> |
| 6 SOT23      | U6-1         | <a href="#">21-0058</a> | <a href="#">90-0175</a> |
| 8 TDFN       | T833-2       | <a href="#">21-0137</a> | <a href="#">90-0059</a> |
