## Double channel high side driver with analog current sense for automotive applications

### Features

|                                   |            |                          |
|-----------------------------------|------------|--------------------------|
| Max transient supply voltage      | $V_{CC}$   | 41 V                     |
| Operating voltage range           | $V_{CC}$   | 4.5 to 28 V              |
| Max On-state resistance (per ch.) | $R_{ON}$   | 50 m $\Omega$            |
| Current limitation (typ)          | $I_{LIMH}$ | 27 A                     |
| Off-state supply current          | $I_S$      | 2 $\mu$ A <sup>(1)</sup> |

1. Typical value with all loads connected.

- General
  - Inrush current active management by power limitation
  - Very low standby current
  - 3.0 V CMOS compatible inputs
  - Optimized electromagnetic emissions
  - Very low electromagnetic susceptibility
  - In compliance with the 2002/95/EC european directive
  - Very low current sense leakage
- Diagnostic functions
  - Proportional load current sense
  - High current sense precision for wide currents range
  - Current sense disable
  - Off-state open load detection
  - Output short to  $V_{CC}$  detection
  - Overload and short to ground (power limitation) indication
  - Thermal shutdown indication
- Protections
  - Undervoltage shutdown
  - Overvoltage clamp
  - Load current limitation
  - Self limiting of fast thermal transients
  - Protection against loss of ground and loss of  $V_{CC}$
  - Over temperature shutdown with auto restart (thermal shutdown)

- Reverse battery protected (see [Figure 32](#))
- Electrostatic discharge protection

### Applications

- All types of resistive, inductive and capacitive loads
- Suitable as LED driver

### Description

The VND5E050AJ-E and VND5E050AK-E are double channel high-side drivers manufactured in the ST proprietary VIPower M0-5 technology and housed in the tiny PowerSSO-12 and PowerSSO-24 packages. The VND5E050AJ-E and VND5E050AK-E are designed to drive 12V automotive grounded loads delivering protection, diagnostics and easy 3V and 5V CMOS compatible interface with any microcontroller.

The devices integrate advanced protective functions such as load current limitation, inrush and overload active management by power limitation, over-temperature shut-off with auto-restart and over-voltage active clamp. A dedicated analog current sense pin is associated with every output channel in order to provide *Enhanced* diagnostic functions including fast detection of overload and short-circuit to ground through power limitation indication, over-temperature indication, short-circuit to  $V_{CC}$  diagnosis and on & off state open load detection.

The current sensing and diagnostic feedback of the whole device can be disabled by pulling the CS\_DIS pin high to allow sharing of the external sense resistor with other similar devices.

**Figure 1. Block diagram**

**Table 1. Pin function**

| Name                         | Function                                                                                     |
|------------------------------|----------------------------------------------------------------------------------------------|
| V <sub>CC</sub>              | Battery connection.                                                                          |
| OUTPUT <sub>1,2</sub>        | Power output.                                                                                |
| GND                          | Ground connection. Must be reverse battery protected by an external diode/resistor network.  |
| INPUT <sub>1,2</sub>         | Voltage controlled input pin with hysteresis, CMOS compatible. Controls output switch state. |
| CURRENT SENSE <sub>1,2</sub> | Analog current sense pin, delivers a current proportional to the load current.               |
| CS_DIS                       | Active high CMOS compatible pin, to disable the current sense pin.                           |

Figure 2. Configuration diagram (top view)

Table 2. Suggested connections for unused and not connected pins

| Connection / pin | Current sense                 | N.C. | Output                         | Input                          | CS_DIS                         |
|------------------|-------------------------------|------|--------------------------------|--------------------------------|--------------------------------|
| Floating         | Not allowed                   | X    | X                              | X                              | X                              |
| To ground        | Through 1 K $\Omega$ resistor | X    | Through 22 K $\Omega$ resistor | Through 10 K $\Omega$ resistor | Through 10 K $\Omega$ resistor |

## 2 Electrical specifications

**Figure 3. Current and voltage conventions**

Note:  $V_{Fn} = V_{OUTn} - V_{CC}$  during reverse battery condition.

### 2.1 Absolute maximum ratings

Stressing the device above the rating listed in the “Absolute maximum ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to the conditions in table below for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality document.

**Table 3. Absolute maximum ratings**

| Symbol        | Parameter                              | Value                      | Unit |
|---------------|----------------------------------------|----------------------------|------|
| $V_{CC}$      | DC supply voltage                      | 41                         | V    |
| $-V_{CC}$     | Reverse DC supply voltage              | 0.3                        | V    |
| $-I_{GND}$    | DC reverse ground pin current          | 200                        | mA   |
| $I_{OUT}$     | DC output current                      | Internally limited         | A    |
| $-I_{OUT}$    | Reverse DC output current              | 20                         | A    |
| $I_{IN}$      | DC input current                       | -1 to 10                   | mA   |
| $I_{CSD}$     | DC current sense disable input current | -1 to 10                   | mA   |
| $-I_{CSENSE}$ | DC reverse CS pin current              | 200                        | mA   |
| $V_{CSENSE}$  | Current sense maximum voltage          | $V_{CC} - 41$ to $+V_{CC}$ | V    |

**Table 3. Absolute maximum ratings (continued)**

| Symbol    | Parameter                                                                                                                                                                    | Value       | Unit             |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|------------------|
| $E_{MAX}$ | Maximum switching energy (single pulse)<br>( $L = 3\text{mH}$ ; $R_L = 0\Omega$ ; $V_{bat} = 13.5\text{V}$ ; $T_{jstart} = 150^\circ\text{C}$ ; $I_{OUT} = I_{limL}(Typ.)$ ) | 104         | mJ               |
| $V_{ESD}$ | Electrostatic discharge<br>(human body model: $R = 1.5\text{K}\Omega$ ; $C = 100\text{pF}$ )                                                                                 |             |                  |
|           | – Input                                                                                                                                                                      | 4000        | V                |
|           | – Current sense                                                                                                                                                              | 2000        | V                |
|           | – CS_DIS                                                                                                                                                                     | 4000        | V                |
|           | – Output                                                                                                                                                                     | 5000        | V                |
|           | – $V_{CC}$                                                                                                                                                                   | 5000        | V                |
| $V_{ESD}$ | Charge device model (CDM-AEC-Q100-011)                                                                                                                                       | 750         | V                |
| $T_j$     | Junction operating temperature                                                                                                                                               | - 40 to 150 | $^\circ\text{C}$ |
| $T_{stg}$ | Storage temperature                                                                                                                                                          | - 55 to 150 | $^\circ\text{C}$ |

## 2.2 Thermal data

**Table 4. Thermal data**

| Symbol         | Parameter                                                 | Max value                     |                               | Unit               |
|----------------|-----------------------------------------------------------|-------------------------------|-------------------------------|--------------------|
|                |                                                           | PowerSSO-12                   | PowerSSO-24                   |                    |
| $R_{thj-case}$ | Thermal resistance junction-case<br>(with one channel ON) | 2.7                           | 2.7                           | $^\circ\text{C/W}$ |
| $R_{thj-amb}$  | Thermal resistance junction-ambient                       | See <a href="#">Figure 36</a> | See <a href="#">Figure 40</a> | $^\circ\text{C/W}$ |

## 2.3 Electrical characteristics

Values specified in this section are for  $8\text{ V} < V_{CC} < 28\text{ V}$ ;  $-40\text{ }^\circ\text{C} < T_j < 150\text{ }^\circ\text{C}$ , unless otherwise stated.

**Table 5. Power section**

| Symbol        | Parameter                          | Test conditions                                                         | Min. | Typ. | Max. | Unit       |
|---------------|------------------------------------|-------------------------------------------------------------------------|------|------|------|------------|
| $V_{CC}$      | Operating supply voltage           |                                                                         | 4.5  | 13   | 28   | V          |
| $V_{USD}$     | Undervoltage shutdown              |                                                                         |      | 3.5  | 4.5  | V          |
| $V_{USDhyst}$ | Undervoltage shutdown hysteresis   |                                                                         |      | 0.5  |      | V          |
| $R_{ON}$      | On-state resistance <sup>(1)</sup> | $I_{OUT} = 2\text{A}$ ; $T_j = 25^\circ\text{C}$                        |      |      | 50   | m $\Omega$ |
|               |                                    | $I_{OUT} = 2\text{A}$ ; $T_j = 150^\circ\text{C}$                       |      |      | 100  |            |
|               |                                    | $I_{OUT} = 2\text{A}$ ; $V_{CC} = 5\text{V}$ ; $T_j = 25^\circ\text{C}$ |      |      | 65   |            |
| $V_{clamp}$   | Clamp voltage                      | $I_S = 20\text{mA}$                                                     | 41   | 46   | 52   | V          |

1. To ensure long term reliability under heavy overload or short circuit conditions, protection and related diagnostic signals must be used together with a proper software strategy. If the device is subjected to abnormal conditions, this software must limit the duration and number of activation cycles.

### 3 Application information

Figure 32. Application schematic

Note: Channel 2 has the same internal circuit as channel 1.

#### 3.1 GND protection network against reverse battery

This section provides two solutions for implementing a ground protection network against reverse battery.

##### 3.1.1 Solution 1: resistor in the ground line ( $R_{GND}$ only)

This can be used with any type of load.

The following is an indication on how to dimension the  $R_{GND}$  resistor.

1.  $R_{GND} \leq 600\text{mV} / (I_{S(on)max})$
2.  $R_{GND} \geq (-V_{CC}) / (-I_{GND})$

where  $-I_{GND}$  is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

Power dissipation in  $R_{GND}$  (when  $V_{CC} < 0$ : during reverse battery situations) is:

$$P_D = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared amongst several different HSDs. Please note that the value of this resistor should be calculated with formula (1) where  $I_{S(on)max}$  becomes the sum of the maximum on-state currents of the different devices.

Please note that if the microprocessor ground is not shared by the device ground then the  $R_{GND}$  will produce a shift ( $I_{S(on)max} * R_{GND}$ ) in the input thresholds and the status output values. This shift will vary depending on how many devices are on in the case of several high side drivers sharing the same  $R_{GND}$ .

If the calculated power dissipation leads to a large resistor or several devices have to share the same resistor then ST suggests to utilize [Section 3.1.2: Solution 2: diode \(D<sub>GND</sub>\) in the ground line](#).

### 3.1.2 Solution 2: diode (D<sub>GND</sub>) in the ground line

A resistor (R<sub>GND</sub>=1kΩ) should be inserted in parallel to D<sub>GND</sub> if the device drives an inductive load.

This small signal diode can be safely shared amongst several different HSDs. Also in this case, the presence of the ground network will produce a shift (≈600mV) in the input threshold and in the status output values if the microprocessor ground is not common to the device ground. This shift will not vary if more than one HSD shares the same diode/resistor network.

## 3.2 Load dump protection

D<sub>ld</sub> is necessary (voltage transient suppressor) if the load dump peak voltage exceeds the V<sub>CC</sub> max DC rating. The same applies if the device is subject to transients on the V<sub>CC</sub> line that are greater than the ones shown in the ISO 7637-2: 2004(E) table.

## 3.3 MCU I/Os protection

If a ground protection network is used and negative transient are present on the V<sub>CC</sub> line, the control pins will be pulled negative. ST suggests to insert a resistor (R<sub>prot</sub>) in line to prevent the μC I/Os pins to latch-up.

The value of these resistors is a compromise between the leakage current of μC and the current required by the HSD I/Os (Input levels compatibility) with the latch-up limit of μC I/Os:

$$-V_{CCpeak}/I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH} - V_{GND}) / I_{IHmax}$$

Calculation example:

For V<sub>CCpeak</sub> = -100V and I<sub>latchup</sub> ≥ 20mA; V<sub>OHμC</sub> ≥ 4.5V

$$5k\Omega \leq R_{prot} \leq 180k\Omega$$

Recommended values: R<sub>prot</sub>=10kΩ, C<sub>EXT</sub>=10nF.

## 3.4 Current sense and diagnostic

The current sense pin performs a double function (see [Figure 33: Current sense and diagnostic](#)):

- **Current mirror of the load current in normal operation**, delivering a current proportional to the load one according to a know ratio K<sub>x</sub>.  
The current I<sub>SENSE</sub> can be easily converted to a voltage V<sub>SENSE</sub> by means of an external resistor R<sub>SENSE</sub>. Linearity between I<sub>OUT</sub> and V<sub>SENSE</sub> is ensured up to 5V minimum (see parameter V<sub>SENSE</sub> in [Table 9: Current sense \(8V<V<sub>CC</sub><18V\)](#)). The current sense accuracy depends on the output current (refer to current sense electrical

characteristics *Table 9: Current sense ( $8V < V_{CC} < 18V$ )*.

- **Diagnostic flag in fault conditions**, delivering a fixed voltage  $V_{SENSEH}$  up to a maximum current  $I_{SENSEH}$  in case of the following fault conditions (refer to ):
  - Power limitation activation
  - Over-temperature
  - Short to  $V_{CC}$  in off-state
  - Open load in off-state with additional external components.

A logic level high on CS\_DIS pin sets at the same time all the current sense pins of the device in a high impedance state, thus disabling the current monitoring and diagnostic detection. This feature allows multiplexing of the microcontroller analog inputs by sharing of sense resistance and ADC line among different devices.

**Figure 33. Current sense and diagnostic**

### 3.4.1 Short to V<sub>CC</sub> and off-state open load detection

### Short to $V_{CC}$

A short circuit between  $V_{CC}$  and output is indicated by the relevant current sense pin set to  $V_{SENSEH}$  during the device off-state. Small or no current is delivered by the current sense during the on-state depending on the nature of the short circuit.

### Off-state open load with external circuitry

Detection of an open load in off mode requires an external pull-up resistor  $R_{PU}$  connecting the output to a positive supply voltage  $V_{PU}$ .

It is preferable  $V_{PU}$  to be switched off during the module stand-by mode in order to avoid the overall stand-by current consumption to increase in normal conditions, i.e. when load is connected.

An external pull down resistor  $R_{PD}$  connected between output and GND is mandatory to avoid misdetection in case of floating outputs in off-state (see [Figure 33: Current sense and diagnostic](#)).

$R_{PD}$  must be selected in order to ensure  $V_{OUT} < V_{OLmin}$  unless pulled up by the external circuitry:

$$V_{OUT}|_{Pull-up\_OFF} = R_{PD} \cdot I_{L(off2)f} < V_{OLmin} = 2V$$

$R_{PD} \leq 22\text{ K}\Omega$  is recommended.

For proper open load detection in off-state, the external pull-up resistor must be selected according to the following formula:

$$V_{OUT}|_{Pull-up\_ON} = \frac{R_{PD} \cdot V_{PU} - R_{PU} \cdot R_{PD} \cdot I_{L(off2)r}}{R_{PU} + R_{PD}} > V_{OLmax} = 4V$$

For the values of  $V_{OLmin}$ ,  $V_{OLmax}$ ,  $I_{L(off2)r}$  and  $I_{L(off2)f}$  see [Table 10: Open load detection \( \$8V < V\_{CC} < 18V\$ \)](#).

### 3.5 Maximum demagnetization energy ( $V_{CC} = 13.5V$ )

Figure 34. Maximum turn-off current versus inductance (for each channel)

Note:

Values are generated with  $R_L = 0 \Omega$ . In case of repetitive pulses,  $T_{jstart}$  (at beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves A and B.

## 4 Package and PCB thermal data

### 4.1 PowerSSO-12 thermal data

Figure 35. PowerSSO-12 PC board

Note:

Layout condition of  $R_{th}$  and  $Z_{th}$  measurements (PCB: Double layer, Thermal Vias, FR4 area= 77mm x 86mm, PCB thickness=1.6mm, Cu thickness=70 $\mu$ m (front and back side), Copper areas: from minimum pad lay-out to 8cm<sup>2</sup>).

Figure 36.  $R_{thj-amb}$  Vs. PCB copper area in open box free air condition (one channel ON)

Figure 37. PowerSSO-12 thermal impedance junction ambient single pulse (one channel ON)

Equation 1: pulse calculation formula

$$Z_{TH\delta} = R_{TH} \cdot \delta + Z_{THtp}(1 - \delta)$$

$$\text{where } \delta = t_p / T$$

Figure 38. Thermal fitting model of a double channel HSD in PowerSSO-12 (a)

- a. The fitting model is a simplified thermal tool and is valid for transient evolutions where the embedded protections (power limitation or thermal cycling during thermal shutdown) are not triggered.

Table 15. Thermal parameters

| C6 (W.s/°C)                    | 3         | 6   | 9   |

## 4.2 PowerSSO-24 thermal data

Figure 39. PowerSSO-24 PC board

Note: Layout condition of  $R_{th}$  and  $Z_{th}$  measurements (PCB: Double layer, Thermal Vias, FR4 area= 77mm x 86mm, PCB thickness=1.6mm, Cu thickness=70μm (front and back side), Copper areas: from minimum pad lay-out to 8cm<sup>2</sup>).

Figure 40.  $R_{thj-amb}$  vs PCB copper area in open box free air condition (one channel ON)

Figure 41. PowerSSO-24 thermal impedance junction ambient single pulse (one channel ON)

Equation 2: pulse calculation formula

$$Z_{TH\delta} = R_{TH} \cdot \delta + Z_{THtp}(1 - \delta)$$

$$\text{where } \delta = t_p / T$$

Figure 42. Thermal fitting model of a double channel HSD in PowerSSO-24 (b)

- b. The fitting model is a simplified thermal tool and is valid for transient evolutions where the embedded protections (power limitation or thermal cycling during thermal shutdown) are not triggered.

Table 16. Thermal parameters

| Area / island (cm <sup>2</sup> ) | Footprint | 2  | 8  |
|----------------------------------|-----------|----|----|
| R1= R7 (°C/W)                    | 0.4       |    |    |
| R2= R8 (°C/W)                    | 2         |    |    |
| R3 (°C/W)                        | 6         |    |    |
| R4 (°C/W)                        | 7.7       |    |    |
| R5 (°C/W)                        | 9         | 9  | 8  |
| R6 (°C/W)                        | 28        | 17 | 10 |
| C1= C7 (W.s/°C)                  | 0.001     |    |    |
| C2= C8 (W.s/°C)                  | 0.0022    |    |    |
| C3 (W.s/°C)                      | 0.025     |    |    |
| C4 (W.s/°C)                      | 0.75      |    |    |
| C5 (W.s/°C)                      | 1         | 4  | 9  |
| C6 (W.s/°C)                      | 2.2       | 5  | 17 |

## 5 Package and packing information

### 5.1 ECOPACK®

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com).

ECOPACK® is an ST trademark.

### 5.2 PowerSSO-12 package information

Figure 43. PowerSSO-12 package dimensions

Table 17. PowerSSO-12 mechanical data

| Symbol | Millimeters |      |      |
|--------|-------------|------|------|
|        | Min.        | Typ. | Max. |
| A      | 1.25        |      | 1.62 |
| A1     | 0           |      | 0.1  |
| A2     | 1.10        |      | 1.65 |
| B      | 0.23        |      | 0.41 |
| C      | 0.19        |      | 0.25 |
| D      | 4.8         |      | 5.0  |
| E      | 3.8         |      | 4.0  |
| e      |             | 0.8  |      |
| H      | 5.8         |      | 6.2  |
| h      | 0.25        |      | 0.5  |
| L      | 0.4         |      | 1.27 |
| k      | 0°          |      | 8°   |
| X      | 1.9         |      | 2.5  |
| Y      | 3.6         |      | 4.2  |
| ddd    |             |      | 0.1  |

### 5.3 PowerSSO-24 package information

## 6 Order codes

**Table 19. Device summary**

| Package     | Order codes  |                |
|-------------|--------------|----------------|
|             | Tube         | Tape and reel  |
| PowerSSO-12 | VND5E050AJ-E | VND5E050AJTR-E |
| PowerSSO-24 | VND5E050AK-E | VND5E050AKTR-E |

## 7 Revision history

**Table 20. Document revision history**

| Date        | Revision | Changes                                                                                                                                      |
|-------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| 01-Apr-2008 | 1        | Initial release.                                                                                                                             |
| 05-Mar-2009 | 2        | Changed <a href="#">Table 18: PowerSSO-24 mechanical data</a>                                                                                |
| 19-Jun-2009 | 3        | <a href="#">Table 18: PowerSSO-24 mechanical data:</a><br>– Changed L (min) value from 0.6 to 0.55<br>– Changed L (max) value from 1 to 0.85 |
| 22-Jul-2009 | 4        | Updated <a href="#">Figure 44: PowerSSO-24 package dimensions</a> .                                                                          |
| 19-Sep-2013 | 5        | Updated disclaimer.                                                                                                                          |

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**ST PRODUCTS ARE NOT DESIGNED OR AUTHORIZED FOR USE IN: (A) SAFETY CRITICAL APPLICATIONS SUCH AS LIFE SUPPORTING, ACTIVE IMPLANTED DEVICES OR SYSTEMS WITH PRODUCT FUNCTIONAL SAFETY REQUIREMENTS; (B) AERONAUTIC APPLICATIONS; (C) AUTOMOTIVE APPLICATIONS OR ENVIRONMENTS, AND/OR (D) AEROSPACE APPLICATIONS OR ENVIRONMENTS. WHERE ST PRODUCTS ARE NOT DESIGNED FOR SUCH USE, THE PURCHASER SHALL USE PRODUCTS AT PURCHASER'S SOLE RISK, EVEN IF ST HAS BEEN INFORMED IN WRITING OF SUCH USAGE, UNLESS A PRODUCT IS EXPRESSLY DESIGNATED BY ST AS BEING INTENDED FOR "AUTOMOTIVE, AUTOMOTIVE SAFETY OR MEDICAL" INDUSTRY DOMAINS ACCORDING TO ST PRODUCT DESIGN SPECIFICATIONS. PRODUCTS FORMALLY ESCC, QML OR JAN QUALIFIED ARE DEEMED SUITABLE FOR USE IN AEROSPACE BY THE CORRESPONDING GOVERNMENTAL AGENCY.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.
