description

The SN55426B and SN55427B are monolithic integrated-circuit plasma display drivers. The logic of the two drivers is complementary to permit controlled writing or erasing at a specified point on the display. The '426B noninverting pulser is normally near ground potential and is pulsed near VCC2; the '427B inverting pulser is normally near VCC2 potential and is pulsed near ground potential. The devices are designed to accept CMOS logic input signals and drive one display line per output.

There are four gates per package with individual data inputs. Additionally, each device has a strobe and a multiplex input controlling all four gates. The devices require two power supplies: the logic section power supply VCC1, and the high-voltage bias supply VCC2. VCC2 controls the magnitude of the output swing.

Each output is designed to sustain 20-milliampere switching transients on the output. Each output is also protected by source and sink clamp diodes with 30-milliampere current capability. Each device is designed to be operated at 50 kilohertz but may be operated as high as 85 kilohertz.

The multiplex and strobe inputs (inputs M and S, respectively) act on all four gates simultaneously and aid in plasma panel design.

The SN55426B and SN55427B are characterized for operation over the full military temperature range of -55°C to 125°C .

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

Supply voltage, VCC1 (see Note 1)	15 V
Supply voltage, VCC2	95 V
Input voltage, VI	15 V
Continuous output current, IO	20 mA
Continuous total dissipation at (or below) 25°C free-air temperature (see Note 2)	800 mW
Operating free-air temperature range	-55°C to 125°C
Storage temperature range	-65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds	300°C

NOTES: 1. All voltage values are with respect to network ground terminal.

2. For operation above 25°C free-air temperature, refer to Dissipation Derating Curves in Appendix A. In the J package, SN55426B and SN55427B chips are alloy mounted.
