

SN54FB2041, SN74FB2041 7-BIT TTL/BTL TRANSCEIVERS

SCBS172B – NOVEMBER 1991 – REVISED SEPTEMBER 1994

- Compatible With IEEE 1194.1-1991 (BTL) Standard
- TTL A Port, Backplane Transceiver Logic $\bar{B}$ Port
- Open-Collector $\bar{B}$ -Port Outputs Sink 100 mA
- Isolated Logic-Ground and Bus-Ground Reduces Noise
- BIAS V_{CC} Pin Minimizes Signal Distortion During Live Insertion/Withdrawal
- $\bar{B}$ -Port Biasing Network Preconditions the Connector and PC Trace to the Backplane Transceiver Logic High-Level Voltage
- Package Options Include Plastic Quad Flat (RC) Package and Ceramic Flat (WD) Package

NC – No internal connection

description

The 'FB2041 are 7-bit transceivers designed to translate signals between TTL and backplane transceiver logic (BTL) environments.

The $\bar{B}$ port operates at BTL-signal levels. The open-collector $\bar{B}$ ports are specified to sink 100 mA. Two output enables, OEB and $\bar{OEB}$, are provided for the $\bar{B}$ outputs. When OEB is high and $\bar{OEB}$ is low, the $\bar{B}$ port is active and reflects the inverse of the data present at the A-input pins. When OEB is low, $\bar{OEB}$ is high, or V_{CC} is typically less than 2.5 V, the $\bar{B}$ port is turned off. The enable/disable logic partitions the device as two 3-bit sections and one 1-bit section.

UNLESS OTHERWISE NOTED this document contains PRODUCTION DATA information current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

7-BIT TTL/BTL TRANSCEIVERS

SCBS172B – NOVEMBER 1991 – REVISED SEPTEMBER 1994

description (continued)

The A port operates at TTL-signal levels and has split input and output pins. The A outputs reflect the inverse of the data at the $\bar{B}$ port when the A-port output enable, OEA, is high. When OEA is low or when V_{CC} is typically less than 2.5 V, the A outputs are in the high-impedance state.

Pins are allocated for the four-wire IEEE 1149.1 (JTAG) test bus. Currently, TMS and TCK are not connected and TDI is shorted to TDO.

BIAS V_{CC} establishes a voltage between 1.62 V and 2.1 V on the BTL outputs when V_{CC} is not connected.

The SN54FB2041 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74FB2041 is characterized for operation from 0°C to 70°C .

FUNCTION TABLE

INPUTS			FUNCTION
OEB	$\bar{\text{OEB}}$	OEA	
L	X	L	Isolation
X	H	L	
L	X	H	$\bar{B}$ data to AO bus
X	H	H	
H	L	L	$\bar{A}$ data to B bus
H	L	H	$\bar{A}$ data to B bus, $\bar{B}$ data to AO bus

SCBS172B – NOVEMBER 1991 – REVISED SEPTEMBER 1994

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage range, V_{CC}	–0.5 V to 7 V
Input voltage range, V_I : except $\bar{B}$ port	–1.2 V to 7 V
$\bar{B}$ port	–1.2 V to 3.5 V
Input current range (except $\bar{B}$ port)	–40 mA to 5 mA
Voltage range applied to any $\bar{B}$ output in the disabled or power-off state	–0.5 V to 5.5 V
Voltage range applied to any output in the high state	–0.5 V to V_{CC}
Current applied to any single output in the low state: A port	48 mA
$\bar{B}$ port	200 mA
Operating free-air temperature range, T_A : SN54FB2041	–55°C to 125°C
SN74FB2041	0°C to 70°C
Maximum power dissipation at $T_A = 55^\circ\text{C}$ (in still air) (see Note 1): RC package	1.4 W
Storage temperature range	–65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 75 mils. For more information, refer to the *Package Thermal Considerations* application note in the 1994 *ABT Advanced BiCMOS Technology Data Book*, literature number SCBD002B.

recommended operating conditions (see Note 2)

SCBS172B – NOVEMBER 1991 – REVISED SEPTEMBER 1994

PARAMETER MEASUREMENT INFORMATION

- NOTES:
- C_L includes probe and jig capacitance.
 - All input pulses are supplied by generators having the following characteristics: TTL inputs – PRR $\leq 10 \text{ MHz}$, $Z_O = 50 \Omega$, $t_r \leq 2.5 \text{ ns}$, $t_f \leq 2.5 \text{ ns}$. BTL inputs – PRR $\leq 10 \text{ MHz}$, $Z_O = 50 \Omega$, $t_r \leq 2.5 \text{ ns}$, $t_f \leq 2.5 \text{ ns}$.
 - Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 - The outputs are measured one at a time with one transition per measurement.

Figure 1. Load Circuits and Voltage Waveforms
